PREFACE

WHEN, in June, 1910, I contributed a Preface to Dr. Watson Grice's historical survey of *National and Local Finance*, I did not expect to be asked to supplement that useful work by anything like a volume of my own. But the administrative problems connected with Grants in Aid are so important, and the subject is one of such pressing interest at this moment, that I could not do otherwise than respond to innumerable inquiries that amounted, in the aggregate, to a demand.

This is, it seems, the first book to appear in the form of a treatise on Grants in Aid. Written, as it has been, under the pressure of other duties, the author has not scrupled to reclaim and incorporate, amid that which now appears for the first time, his previous scattered contributions to the subject; and to use them, where they fitted, as bricks in this more systematic edifice. And thus, if the diligent reader is sometimes haunted as by an echo, let him not impatiently conclude that the whole book is echo; and let him remember that, when a thing has been said once, it is not altogether impertinent, if there be need, for it to be said again, and said in volume form!

The extensive bibliographical list of references to the subject, included in this volume, I owe almost entirely to Dr. Watson Grice, who kindly placed it at my disposal; and to Mr. B. M. Headicar, the Librarian of the British Library of Political Science, in connection with the London School of Economics, where practically all the sources mentioned are accessible to any serious student.

GRANTS IN AID : A CRITICISM AND A PROPOSAL

I

WHAT OUR GRANTS IN AID SEEM TO BE, AND WHAT THEY REALLY ARE

THE "Grant in Aid," a device peculiar to English administration, has hitherto failed to receive the consideration that its practical importance deserves. Until the other day, when Dr. Watson Grice painstakingly worked out the history, with all the Continental analogies that are available,¹ there was, I believe, no book which gave any considerable amount of information on the subject. So far as I know, the Grant in Aid, as an instrument of government, has, except in so far as that volume dealt with this aspect of the subject, never been made the subject of a scientific monograph. In the various works describing the constitution under which we live, the Grant in Aid either finds no mention at all, or else is briefly referred to as merely a matter of financial adjustment. Even in the wilderness of blue books, though masses of uncoordinated facts have been revealed,² it is difficult to find any complete and comprehensible account of all the existing Grants in

¹ *National and Local Finance*, by J. Watson Grice, D.Sc. (Econ.), 1910.

² See especially Mr. Goschen's Report to the Poor Law Board on the progressive increase in Local Taxation, H.C. No. 470 of 1870, reprinted as H.C. No. 201 of 1893; Cd. 5344 of 1888; Mr. Fowler's Report on Local Taxation (H.C. No. 168 of 1893); Sir Edward Hamilton's Memorandum on Imperial and Local Taxation in Cd. 9528, 1899, and the official documents cited therein; Final Report of Royal Commission on Local Taxation (England and Wales), Cd. 638 of 1901, in which the separate statesmanlike Memorandum of Lord Balfour of Burleigh, concurred in by two successive Permanent Secretaries to the Treasury, Sir George Murray and (the late) Sir Edward Hamilton, is by far the best thing that has been done on the subject; see also final Report of the same Commission for Scotland, Cd. 1067, 1902, and for Ireland, Cd. 1068, 1902.

Aid, whilst of their actual working in the various branches of public administration there is practically no information at all. Those politicians who seek to deal with the subject usually submerge the Grant in Aid in the Serbonian bog of the "incidence of Local Taxation," or lose it amid the quicksands of "relief to the ratepayers." To harassed Civil Servants, on the one hand, and Local Government officials, on the other, the Grant in Aid means, too often, only a series of more or less successful inroads on the Exchequer. Of its importance as an instrument of government, apart from financial results, there is seldom any consideration.

Yet if, at the beginning of the twentieth century, we survey the whole field of government in the United Kingdom—if we examine, one by one, the different branches of public administration for the initiation and control of which Parliament exists, and for the maintenance of which we pay our rates and taxes—we shall find that, so far as they are entrusted to our local governing bodies and disregarding particular cases, they vary in efficiency according to the extent to which use has been intelligently made of the Grant in Aid. In fact, judged by actual day-by-day results, the Grant in Aid, whether we like it or not, has become a governmental instrument of extraordinary potency for good or ill, of greater actual importance in the lives of the people than parts of the Constitution to which more attention is directed. Whether a given Act of Parliament actually "works" (like the Act of 1856 establishing the County Constabulary) or (like the much-vaunted Children Act of 1908) remains, so far as the great part of the kingdom is concerned, virtually a dead letter, is found in practice to depend much less on what particular phraseology the Cabinet and the House of Commons decide upon, or on what the House of Lords may have done to it by way of amendment, than on what arrangement has been made to connect its operation with the system of Grants in Aid. Whether any new branch of the Local Government service hardens into a stagnant bureaucracy, smothered in red tape and rendering the very minimum of utility to the community; or blossoms and

develops into an ever-improving, ubiquitously-serving agency for really accomplishing the object for which it was established, depends very largely on the particular conditions upon which its Grant in Aid is made. In short, if we seek to estimate the real as distinguished from the nominal Constitution of the United Kingdom of the present day—if we have regard to the actualities of administration rather than to the items of pageantry—we may come to the unexpected conclusion that the Grant in Aid, mere financial adjustment though it seems to be, is more and more becoming the pivot on which the machine really works.

The Grant in Aid, as we see it to-day, is commonly regarded as an incidental consequence of Local Government. In view of the fact that, in the complicated hierarchy by which English administration is conducted, the Local Authorities were first in the field, we might more correctly describe it as a result of the development of Central Government. Down to the latter part of the eighteenth century, when the Post Office began to expand with the growth of trade and intercommunication, the Customs and Excise services to develop, and the military and naval establishments to grow apace, nearly all the public administration that existed was in the hands of the Parish, the County Justices in Quarter Sessions assembled, and the Municipal Corporations.¹ And the Central Government let them alone. Right down to 1832 there was practically no systematic connection between the uncounted Local Authorities and the Central Government. Each Parish, each Quarter Sessions, each Corporation was, within its own sphere, autonomous; and was as independent of national control, and expected as little from the Exchequer, as the social clubs of tradesmen that gathered in the taverns of the time. Nor did any scheme of executive control, or plan of financial aid, enter into the conception of the framers of the Municipal Corporations Act of 1835, upon which, by successive derivations,

¹ This has been described in *English Local Government*, by S. and B. Webb; Vol. I. The Parish and the County, Vols. II. and III. The Manor and the Borough.

the whole of our present local government is founded. We can now see that, at this point, England stood at the parting of the ways.

If we look over the world of highly developed nations to-day, we may recognise three main types of relation between local and central government.¹ In France and Germany, Belgium and Austria, and generally throughout the Continent of Europe, we find the local administration entrusted, in the main, to salaried officials, often of special training and high professional qualifications, who are sometimes actually appointed by, and whose work is, at any rate, closely supervised by, and completely subordinate to, the various central departments of the Executive Government. There are, it is true, sometimes local councils of various grades and formed in various ways, by which the consent of the inhabitants of the several localities is more or less adequately expressed, and some more or less imperfect degree of local control is secured. But the functions and powers of these local councils are narrowly limited; and their actual interferences with the day-by-day administration are, in almost all cases, subject to the control and approval of the Central Executive departments. This particular relation between central and local government (which Japan, and, I suppose, also China, seem to be more and more developing) may be conveniently termed the Bureaucratic System.

At the other extreme stands the organisation of local government in the United States, where the cities and townships are, broadly speaking, autonomous corporations, not in the least subordinate to the State or Federal Executive departments, and standing even to the legislatures in no more intimate or subordinate a relation than the Government departments themselves. There is, accordingly, in such a country, nothing in the nature of an administrative hierarchy, and nothing in the nature of a national system, whether in education, sanitation, collective provision for the dependent classes, or means of

¹ *National and Local Finance*, by J. Watson Grice, D.Sc. (Econ.), 1910; *Local and Central Government*, by Percy Ashley, M.A., 1906; *Comparative Administrative Law*, by Frank J. Goodnow, 1893.

communication. This, which has its merits, as well as its characteristic drawbacks, may be termed the Anarchy of Local Autonomy. It seems to have been partially adopted by Canada. It has given the United States the worst local government of any country claiming to be civilised.

In the United Kingdom we have, by characteristic good luck, stumbled on a third arrangement.¹ Between 1590 and 1640 we bade fair to develop an organised national system, in which the Lords of the Council, the Judges of Assize, the Justices of the Peace, and such corporate unities as the Parish and the Borough would all have their places.² When this (with much else) got knocked on the head in 1642-9, there remained only an Anarchy of Local Autonomy, lasting from 1660 to 1832, which was strictly comparable with much in the United States of to-day. Gradually, however, it was perceived that it was desirable that there should be, at any rate, some external audit of local government accounts, and that some external approval should be required before the members of a local governing body were permitted, not merely to spend the rates paid by those who elected the councillors, but also to embark on enterprises mortgaging the future. Presently it was realised that the government of a town was not merely a matter of interest to the inhabitants of that particular town, but that, whether in respect of roads and bridges or of infectious diseases, whether in the health or in the education of its citizens, the nation as a whole had something at stake. John Stuart Mill drew pointed attention to the fact that the central executive departments could hardly fail to have at their command a wider experience and a greater knowledge than any local body could possess.³ This, however, did not mean that we began to adopt what I have termed the Bureaucratic System. What we had to find was some way of securing national inspection and audit, and the amount of national supervision and control that was

¹ *Cambridge Modern History*, Vol. XII., ch. 22 (Social Movements).

³ *Representative Government*, by John Stuart Mill, 1861.

required in the interest of the community as a whole, without offending the susceptibilities of local autonomy, and without losing the very real advantage of local initiative and local freedom to experiment. Without theory, without science, and, indeed, almost without the notice of political students, a solution has been found in the device of the Grant in Aid. The National Government, in the course of the three-quarters of a century from 1832 successively "bought" the rights of inspection, audit, supervision, initiative, criticism, and control, in respect of one local service after another, and of one kind of local governing body after another, by the grant of annual subventions from the national Exchequer in aid of the local finances, and therefore, in relief of the local ratepayer. By the unselfconscious invention of Grants in Aid, we have, in the United Kingdom, devised a new kind of relation between local and central government, and created a new species of administrative hierarchy, which has attributes of its own, and which, with our particular kind of Local Government, produces results, in a remarkable combination of liberty and efficiency, on the whole preferable to the achievements of either the Bureaucratic System of France and Germany or the American Anarchy of Local Autonomy.

By a "Grant in Aid," the English administrator understands a subvention payable from the Exchequer of the United Kingdom to a Local Governing Authority, in order to assist that Authority in execution of some or all of its statutory duties. The subvention may be an isolated payment, but is usually recurrent or annual. It may be a matter of statutory obligation or dependent on the recurring decision of the Minister in charge of a particular department. It may be unconditionally of fixed amount, or variable according to the circumstances of the time. Most important of all, its variable amount may be dependent on the growth of population, or of a particular section of it, on the amount of some particular service, on the number of officers appointed, or the sum of their salaries, on the expenditure of the receiving Authority, on the rateable value of its district, on the efficiency of its work, or

on some other condition. And according to the conditions and stipulations that are attached to the Grant in Aid, so will be, whether or not we like it or foresee it, its effect on public administration.

So little have these facts been realised by those who have devised our financial subventions, that we find existing to-day all sorts of Grants in Aid, for all sorts of subjects, allotted to the Local Authorities in all sorts of differing proportions and under all sorts of conditions, which very often tend to counteract and nullify each other. The whole field is a chaos which practically no one understands—certainly no ordinary Town or County Councillor, or member of a Board of Guardians. I have neither space nor patience to set forth even a tithe of the complications and absurdities that have grown up, though a considerable number of specimens will be found in the subsequent pages.

The whole development of these Grants in Aid has taken place since 1832; the real start was perhaps made in 1846; but most of the growth has occurred since 1874.¹ No pretence at a history can here be given, but some estimates of the amounts in different decades may conveniently be afforded. In 1830 the total payments from the National Exchequer to such Local Authorities as then existed, which were mostly odds and ends of historical survivals, seem to have been insignificant, in fact considerably under a hundred thousand pounds. Even in 1840 I do not think such payments (including Scotland and Ireland, and the Education Grant) reached half a million. By 1850, after Sir Robert Peel's concessions in 1846 had been carried into law, they appear to have grown to three-quarters of a million, and by 1860 to over a million. In 1870 I gather that the total may have been nearing two millions. By 1880, at the close of the Conservative Administration, the amount for the United Kingdom approached what was then thought the colossal sum of five millions. Within the next ten years, after the

¹ The facts will be found in Sir Edward Hamilton's Memorandum on Imperial and Local Taxation, in Cd. 9528 of 1899; or in *National and Local Finance*, by J. Watson Grice, D.Sc. (Econ.), 1910.

Goschen readjustments, the aggregate had, in 1890, reached no less than twelve millions. By 1900 it exceeded sixteen millions; and in the current year, 1911-12, I make out that the total for the United Kingdom, including all kinds of local subventions, cannot be much less than thirty millions sterling, being about 18 per cent. of the Government revenue. And the end is not yet. The Chancellor of the Exchequer has definitely promised a considerable increase in these subventions for one service or another, whilst on all sides there arise new demands. It does not seem extravagant to predict that by 1920, when the total revenue of the National Government will probably exceed two hundred million pounds, the Chancellor of the Exchequer of the day will find himself paying away to the Local Authorities as much as a quarter of all he receives,¹ or fifty millions sterling.

¹ Lord Farrer estimated that the subventions to Local Authorities reached, in 1890, 24 per cent. of the national revenue at that date (Cd. 9528 of 1899, p. 74).

II

WHY HAVE GRANTS IN AID AT ALL?

AT this point we may conveniently consider why any such diversion of funds from the central Exchequer to Local Authorities should take place. The question cannot fail to arise, Why have Grants in Aid at all? To the practical politician the inquiry will seem a useless one, for no Government will ever venture to abolish a system which reduces the rates, on an average, by something like 2s. 4d. in the £! A rise in the local rates all over the kingdom by such an amount would upset the strongest administration. But the inquiry is worth pursuing, if only because the whole system of subventions from the Exchequer is on all sides frequently misunderstood. The Local Authorities demanding the Grants, and the complacent Ministers according them, are apt to regard them merely as "doles" in relief of local burdens. To old-fashioned Radicals they often seem to represent attempts on the part of rent receivers to escape from the hereditary burdens on private property in land—in fact, nothing but successful depredations by the land-owning class on the payers of customs and excise duties. The farmers and country gentlemen do their best to encourage this view by clamouring for additional grants merely in relief of their own local rates. To Mr. Gladstone—who never to the end of his days realised either the importance of local government or the superiority, in social value, of administration over House of Commons "politics"—all the grants were alike "doles," mere vexation of spirit, raids on the Exchequer by the agricultural interest, a wanton encouragement of "extravagance" (by which term he

meant merely any increase of expenditure by public authorities¹).

The argument of the "country party" for Grants in Aid may be more plausibly put in the contention² that the subvention from the National Exchequer represents a contribution from personal property and industrial incomes towards the cost of local government, which would otherwise have to be borne entirely by the local rates on land and houses, and therefore, it is assumed, indirectly, and in the long run, by the owners of the rentals of this real estate. Historically, of course, this was how the main cost of local government used to be borne. But the aggregate cost of local government has enormously increased; and it is urged that the increase represents a new burden which it is unfair to cast wholly upon the recipients of agricultural rent, who, it is alleged, or at any rate assumed, find their incomes dwindling with every new development of local administration.

We need not inquire whether this argument has ever been made out to the satisfaction of economists and statisticians. As a defence of Grants in Aid it is weakened by being based, usually, on what is really a misunderstanding of the statistics. Paradoxical as it may seem, there has been, in the course of the nineteenth century, —comparing 1900-11 with 1800-11,—no aggregate increase in the burdens on agricultural land. The great increase in the cost of local administration, due to the addition of new services, has taken place almost entirely in the towns, not in the rural districts; and in the towns, which have practically all grown in size in the course of the century, though not, of course, to anything like the same extent, the economist may not unreasonably regard this increased charge as nothing more than a partial recoupment of a practically universal "unearned increment" of

¹ Lord Farrer seems loyally to have upheld this view to the end of his days; see his work, *Mr. Goschen's Finance, 1887-90* (1891), and his lengthy Memorandum in Cd. 9528 of 1899, pp. 66-84.

² This will be found running through all the Parliamentary debates on Local Taxation from 1834 downwards, notably in the speeches of Disraeli, Sir Massey Lopes, Albert Pell, and Lord St. Aldwyn; and it finds expression in the Final (Majority) Report of the Poor Law Commission on Local Taxation, Cd. 638 of 1901.

land values. It is perfectly true that London and Liverpool, Glasgow and Grimsby, West Ham and West Hartlepool are spending much more on their local administration at the beginning of the twentieth century than they were at the beginning of the nineteenth century. But it has been very largely as the result of this expenditure that the rental value of these towns has risen by leaps and bounds. It is not merely a question of the execution of drainage works and street improvements, which definitely raise the rental value of the local real estate. The landlords who own the sites of these towns—though they may believe their rentals to be diminished by the modern high rates—are, in fact, receiving, net, much more rent from the same sites than ever they or their ancestors did, not merely by reason of the execution, out of the rates, of “structural improvements” of the town sites, but also by all the other expenditure *without which there would not have assembled so large a population on these sites*. Thus, the expenditure on police and sanitation, schools and hospitals, town halls and libraries, parks and museums, though they cannot be shown directly to increase the value of any particular property, are concomitant with a very real tendency to an increase in the value of the real estate which must be purchased or rented by the population using these local advantages. Without the amenities of local government so large a population could not possibly have gathered on that town site or so large an increase of rental value have been created. Accordingly, the weakness of using the argument of an increase in local burdens as a ground for Grants in Aid is that it is apt to be met by inquiring whether it is really unfair that the ever-growing revenues from urban ground rents of the Duke of Devonshire should (if they do) indirectly bear the expense of paving, cleansing, lighting, sewerage, educating, and doctoring Barrow and Eastbourne; or that the growing cost of governing Cardiff should intercept (if it does) a part of the constantly increasing rentals of the Marquis of Bute and the Earl of Plymouth; or that the 30,000 owners of the hundred and twenty square miles of London, whose net rental is certainly ten times what it was a hundred

years ago, should get in that century only a tenfold increase in their incomes, instead of the twentyfold increase which might have been the result if the whole cost of the Metropolitan services had been borne by a tribute levied, say, on India, and if all London (like a few favoured spots in it) had in consequence been made, by statute, for ever rate-free?

In the rural districts of England, it is an astonishing fact—quite incredible to the present generation of farmers and country gentlemen—that the total cost of local administration has often not risen at all, compared to the state of things prior to 1832. What, they say, with all the expensive fads about education, sanitation, and the rest of it? They forget that, in many a country district of South England especially, the net cost of all the new services is more than covered by the total disappearance of the Church Rate,¹ and (what is financially more important) by the enormous decrease in the Poor Rate. Certainly, over a great part of rural England the total rates represent a much smaller proportion of the contemporary rental value than they did in 1832. In 1803 the average rates throughout the then almost entirely rural county of Sussex were 8s. 7½d. in the £; and the average throughout the equally rural county of Monmouth was 7s. 11¼d. in the £. These were not even the most highly rated counties. Throughout all Carmarthenshire the average rate was 12s. 9d. in the £; and throughout all Pembrokeshire it was 11s. 8½d. in the £. Even in 1826-7 all the land in Sussex was bearing a burden, on an average, of rates at 6s. 11¼d. in the £; all the land in Bedfordshire one

¹ The Church Rate was the rate made in church by the inhabitants there in vestry assembled, not a rate for the church. More ancient than the Poor Rate, and unfettered by statutory restrictions, it furnished the income from which the expenses of the churchwardens and the vestry, as the local governing authority of the parish, were met. Among these expenses was the cost of maintaining the fabric of the church and the churchyard, and the incidental outlays connected with the church services. Growing popular opposition to these latter items, which had unfortunately been held to be obligatory, led in the middle half of the nineteenth century, not to their elimination, but, by a misunderstanding of the nature and history of the Church Rate, to its discontinuance and eventual statutory abolition. (See *History of Local Rates in England*, by Professor E. Cannan, 1896; *The Parish and the County*, by S. and B. Webb, 1907.)

of 6s. 2d. in the £; all the land in Kent one of 5s. 8 $\frac{3}{4}$ d. in the £; and all the land in Buckinghamshire one of 5s. 5d. in the £, being more than twice as much as at present.¹ These averages conceal, it need hardly be said, the extreme cases, in which the Poor, Church, and Highway Rates in particular parishes habitually exceeded ten or twelve shillings in the pound. There is no getting over the official conclusion "that at no period in the present century, for which statistics are available for the purposes of comparison, has the rate in the pound of the rural rates been so low as it was in 1890 and 1891" (it might now be said, as low as it has been between 1890 and 1910) "in the great majority of the counties of England and Wales; and that the counties in which the fall in the rate in the pound has been the greatest have, generally speaking, been the agricultural counties."²

Nor is it merely in the rate in the pound which is, *in the rural districts*, nearly everywhere lower than it was in 1803 or 1826-7, when the Parish Overseer had not infrequently to levy rates of 5s. in the £, *three or four times a year*. Even taking into account the more accurate assessments that now prevail, it is on record that, in many a parish, the farmer of 1800-1832 habitually paid more to the Parish Overseer than he did to his landlord and tithe owner; a position in which, I suppose, very few English farmers stand to-day. In short, even in the rural districts, the share of the contemporary annual rent that reaches the landlord has, to say the least of it, over a large part of England, not become any smaller in the course of the past hundred years; and in most places it is, even in purely agricultural districts, greater than it was in 1832. It is, indeed, not only actually greater in amount, but also, usually, a greater proportion of the total. The economist may well conclude that the case for the shifting of what is no more than the hereditary burden on private landownership has not been made out. The mere fact that a large part of what used to be spent on the relief of the poor is

¹ See the exact figures given in H.C. No. 168 of 1893, p. xxxiv.

² H.C. No. 168 of 1893, p. xxxv.

now spent on schools and hospitals does not appear to entitle the landlord to any remission of the part of the economic rent which he has from time immemorial rendered to the community, and which, as a matter of fact, over a large part of England, now both amounts to a smaller sum and represents proportionately a smaller burden than was borne by his estate in 1832.

Whether there is any ground, apart from the natural objection to be taxed, for asking that the recipient of a large income not derived from land, or the mere average citizen who owns no land and may not even be a ratepayer in his own person, should be forced to contribute directly towards the cost of the local government that he enjoys, is a more complicated issue. In these matters, it is necessary to regard all the taxation of the nation as a whole. There can be no sound reason for trying to make every grade of citizens, and the possession of every kind of property, contribute in exactly their due proportion to every separate item of public expenditure. Equitable taxation is so difficult of attainment, and the exact incidence of particular imposts so complicated, and often so uncertain, that we must at any rate be contented with equity in the aggregate. If the owners and occupiers of real estate furnish, as such, the greater part of the revenue of Local Authorities, these particular persons contribute, as such, much less to the revenue of the National Government.¹ If the mere citizen, who does not happen to be a householder, does not seem to be paying for the local government that he enjoys, the small class of landlords and farmers seems equally to be escaping much of the contribution to the National Government than falls on the far more numerous payers of customs and excise duties. To the economist and statistician, the inequalities and injustices of present-day taxation relate much more to its distribution among incomes of different amounts than to

¹ The (Majority) Report of the Royal Commission on Local Taxation—a body anxious to put the case for the rural districts as high as possible—concluded that, in 1899-1900, taxes incidental to real property contributed 88.9 per cent. of the local tax revenue. But the same table points out that these taxes contributed only 39 per cent. of the national tax revenue (Cd. 638 of 1901, p. 15).

the contributions exacted of different kinds. The grievance is rather that of the person taxed so as to encroach on the minimum necessary for healthy subsistence, or so as to limit desirable expenditure on family nurture, than that of the person taxed on account of his enjoyment of an income derived from some particular source. Least of all is it likely that any grievance will be admitted as of economic validity when it amounts only to the continued existence of charges on real estate which has been purchased or inherited subject to those very charges. The man who has inherited or purchased a leasehold might as well regard the ground rent that he has to pay as being an unfair and excessive addition to his income tax.

The equitable case for Grants in Aid as a partial relief to the owners and occupiers of real estate from the increased and excessive burdens which the Local Authorities that they elect are supposed to be placing upon them is therefore one which it is difficult to make good. It appeals to the "country party," because they are far more conscious of the new burdens than of the remarkable diminution of the old ones. It fails to convince, not the Liberal and Radical Party only, but also the economists and statisticians; whilst among the representatives of the urban districts it merely stimulates rival claims on the Exchequer. But this does not mean that there is no more valid case for Grants in Aid than is presented by the country gentlemen. As is quite usual in argument, a defective case has led to an erroneous reply. To the question, why should we have Grants in Aid at all? the answer of the student of political science has no relation to the incidence of taxation as between different social classes, or as between different sources of income. It in no way depends on any unjust or oppressive increase in the burden. The case for Grants in Aid as an integral part of our constitutional machinery is quite otherwise made out.

The case stands on four grounds. Grants in Aid are necessary, in the first place, to prevent an extreme inequality of burden between one district and another. The cost of administration of a modern state—and notably that

part of it which we, in the United Kingdom, entrust to Local Authorities—bears a very marked relation (i) to the number of children for whom education (and much else) has to be provided as a collective service; (ii) to the amount of sickness, premature invalidity, and old age infirmity that prevails among the population, necessitating expensive sanitation, hospitals, medical attendance, maintenance, etc.; (iii) to the extent of the traffic along its means of communication, involving road maintenance, paving, lighting and cleansing, bridges, police, etc.; (iv) to the conditions under which the mass of the population are housed, which is found to be a curiously accurate index to the amount of public services required by them; and (v) generally, in many unforeseen ways, to the poverty of the inhabitants. Now, in all these respects, district differs from district, county from county, and even kingdom from kingdom, to an extent that is not commonly realised. There is, for instance, literally ten times as large a proportion of persons over 70 years of age in rural parts of Wales or Ireland as in the town of Barrow-in-Furness. Even with administration of equal strictness, equal honesty, and equal economy, the cost of governing a hundred thousand persons in West Ham must necessarily be several times as great as that of governing a hundred thousand persons in Hampstead. And the inequality of necessary cost of administration is aggravated by a corresponding inequality of means to bear the cost. Nearly all the circumstances which make the local administration per head relatively high, result also in the income or accumulated wealth of the local residents being relatively low. A district in which the proportion of children to adults, of persons over 70 to those at the productive ages, of sick persons to persons in health, of consumptives to the total population, and of overcrowded slum dwellers to villa residents is relatively high, is inevitably a district in which the rateable value per head of population is (among urban areas) relatively low. Thus the inequality of total cost becomes an immensely aggravated inequality of rate in the pound. To leave each Local Authority to pay for its own sanitation, its own schools, its own roads and bridges, its own sick and infirm,

and its own aged poor would mean that some districts would have to incur a rate in the pound ten or even twenty times as great as others. Under these circumstances the relatively poor districts would inevitably have local services so far behind the current standard as to cause local discontent, serious interregional inconvenience, and a real grievance to the inhabitants of the more favoured districts. The distribution of the common burden of taxation is felt to be so inequitable as to hinder any further development of the public service. One way of securing further progress (as in the case of the Old Age Pensions Act of 1909) is to convert the service into a national one, and thus to throw the cost on national taxation. The other way, exemplified in the grants for elementary schooling, is to meet a part of the cost by a Grant in Aid, made to bear some proportion to the actual amount or cost of the service in each locality, and thus to meet a larger proportion in the more heavily burdened of the districts. The way actually to aggravate this inequality, and to transform the Grant in Aid from a beneficent to a maleficent force, is to make it vary in proportion to the rateable value of each district, which is actually how several of the Grants in Aid have been allocated, thus giving to the richer districts, which have least administration to pay for, and the greatest means, more than to the poorer districts, which have most administration to pay for and the least means! As this is one of the easiest methods of distribution of a given sum, requiring no more intelligence than a grasp of the four rules of arithmetic, it is, in the absence of any scientific consideration of the subject, the one most naturally chosen in the first instance. "It is somewhat anomalous," mildly observes Lord Balfour of Burleigh, "that at least three of the present grants [in Scotland] are still distributed, wholly or in part, in direct proportion to valuation. This system undoubtedly results in the granting of greater relief to wealthy districts than to poorer districts; and *we trust that it will not again be adopted in any amendment or extension of the grants.*"¹

¹ Final Report (Scotland) of Local Taxation Commission, Cd. 1067, 1902, p. 43.

The second reason for a system of Grants in Aid is of even greater moment than that of Equalisation of Burden. They are needed to give weight to the suggestions, criticism and authoritative instructions by which the Central Authority seeks to secure greater efficiency and economy of administration. This, indeed, is by far the most important aspect of Grants in Aid.¹ The verdict of administrative experience is that, properly devised, they afford a basis for the best of all relations between the National Government and the Local Authorities. A century of experience has demonstrated that it is undesirable for Local Authorities to be subject to no administrative control whatsoever from a Central Authority, for them to be left without independent inspection or audit, without access to centralised experience and specialist knowledge, without any enforcement of the minimum indispensably required for the common weal, and without mitigation of the stupendous inequality of local rates that complete autonomy involves. On the other hand, the grant to a Government Department of arbitrary powers to sanction or disallow, or peremptorily to order this or that, is felt, in this country, to be derogatory to the independence, the dignity, and the spontaneous activity of freely elected representatives of local ratepayers, spending their own funds. Such mandatory instructions from a Government Office in Whitehall can be enforced only by cumbrous legal processes; and they have proved, in practice, to give the Government Department little real power over recalcitrant local bodies. It is in vain that Parliament endows the Local Government Board with ample statutory powers—on paper—to compel typhoid-smitten Little Pedlington to provide itself with a proper drainage system and water-supply. Little Pedlington flatly refuses, or stubbornly neglects to do so. The Local Government Board, for all its paper powers of coercing Little Pedlington by Mandamus or by independent action in default, finds itself practically impotent; and hundreds of Little Pedlingtons retain to this day their primitive insanitation triumphantly. Very different has been the

¹ See this developed in the Report of the Royal Commission on the Poor Laws, etc., 1909 (Minority Report, Part I., ch. 9).

experience of the influence of a Central Authority wielding the instrument of a well-devised Grant in Aid. Between 1830 and 1856 there was felt to be urgent need of a well-organised constabulary force in the provincial boroughs and counties. By the Act of 1835 Parliament attempted to make it compulsory on the Municipal Boroughs to establish such a force. In the counties the Justices were empowered to establish one. In both boroughs and counties the constabulary remained weak and inefficient. By an Act of 1856 the establishment of an efficient force was not only made everywhere obligatory, but what was far more important, the Government agreed to contribute one-fourth—after 1874, one-half—of whatever expense the locality incurred on its police force, provided that the Home Office was satisfied, after inspection, that the force was adequate and efficient.¹ Under this combination of pressure and inducement, all the provincial police forces have steadily improved, rapidly rising, indeed, to a common level of adequacy and efficiency, the proportion of policemen to population having, on an average, nearly doubled, and the standard of competency having been enormously raised. At first, all the forces were found inadequate and inefficient, and many counties and boroughs either made no application for a share in the Grant, or were refused it. Gradually more and more voluntarily came in to the new system. At every inspection the defects have been pointed out in a way that could not be ignored. The mere intimation that, unless these shortcomings were, somehow or another, remedied before the next annual inspection came round, the Secretary of State might have to consider the propriety of withholding a portion of the grant (now the certificate without which the Exchequer Contribution cannot be paid) has usually sufficed to induce the Local Authority—not necessarily next month, but gradually, in due course—to effect more or less of the necessary improvements—not necessarily in exact compliance with any Government pattern, but with the fullest sense of local independence, exercising its own judgment

¹ See the story well told in *National and Local Finance*, by J. Watson Grice, D.Sc. (Econ.), 1910, pp. 37-41, 64-5.

in its own way, and often apparently on its own initiative. In the course of fifty years, though the official criticisms have been incessant, and though the Home Office has not been afraid, in, at any rate, one bad case of recent years, actually to withhold the Government contribution, it has seldom been necessary to take this course.¹ Of legal proceedings, by Mandamus or otherwise, to compel a recalcitrant Local Authority to do what the statute required, there has been, in this matter of a constabulary force, no question. It is therefore not surprising to find this system of Grants in Aid upheld by such great authorities as Lord Balfour of Burleigh, Sir George Murray, and the late Sir Edward Hamilton. "In the administration of national services," says the first-named, with the concurrence of the others, "it is of the utmost importance that the Central Authority should endeavour to secure uniformity, efficiency, and economy, and with this object I am of opinion that it should be invested with extensive powers of control. Such powers may be most effectively exercised if accompanied by a system of Grants in Aid."²

Unfortunately, the story of the police force is but little known to the ordinary Member of Parliament. The officers and members of Local Authorities naturally prefer to be free from the inspection and criticism of any external body. The representatives of the Treasury naturally desire to have a fixed limit to the claims that may be made upon them, and prefer, therefore, an invariable grant. And it is a curious peculiarity of English Government Departments that, far from seeking to "amplify their jurisdiction," or to enlarge their functions, Ministers and Civil Servants alike shrink from the responsibility of having to

¹ The number of boroughs, cities, and counties receiving no grant for police was as follows:—

1857	1860	1865	1870	1875	1880	1885	1890
120	78	59	56	38	32	25	0

(Goodnow's *Municipal Problems*, p. 125; Grice's *National and Local Finance*, p. 64). There is one exceptional case (the ancient City of London, a small enclave of one square mile in the midst of the 700 square miles area of the Metropolitan Police Force), in which the Local Authority, the old City Corporation, whilst priding itself on maintaining a highly efficient police force, refuses to apply for a share in the Grant in Aid.

² Final Report (Minority) of Local Taxation Commission (England), 1901, p. 82.

supervise the actual course of local administration. Hence any "expert departmental committee" is apt to ignore altogether this most important use of the Grant in Aid; and to favour, instead, some fixed allocation of the available sum among all the different claimants, upon a purely mechanical basis of population, rateable value, or number of some easily countable objects (such as school attendances, hospital beds, or lunatic asylum patients), irrespective of whether or not the Local Authority is efficiently carrying out the wishes of the Legislature. Any such proposal should be strenuously resisted.

The third reason for Grants in Aid is that they furnish the only practicable method, consistent with local autonomy, of bringing to bear upon local administration the wisdom of experience, superiority of knowledge, and breadth of view which, as compared with the administrators of any small town, a central executive department cannot fail to acquire,¹ for the carrying into effect of the general policy which Parliament has prescribed. Without in the least believing that there exists in any Government office a special fund of administrative wisdom, or that the inhabitants of the smallest town may not know best how to govern that town, there are usually some lines of policy and some directions of expenditure which, in the common judgment of the community, are better than others. Yet experience shows that some Local Authorities will at all times be backward in discarding the worse and adopting the better alternative. This might not, of itself, afford much ground for a Grant in Aid, though Lord Balfour of Burleigh tells us that the Grants "in force before 1888 were . . . in most cases devised with a view to guiding local administration in the desired direction."² But as, for other reasons, there must be Grants in Aid, it is of the utmost importance that they should at any rate be so devised as to afford no encouragement to injudicious or detrimental expenditure, of demonstrable harm to those larger or more distant interests that any particular Local

¹ *Representative Government*, by John Stuart Mill, 1861.

² Final Report (Minority) of Local Taxation Commission (England), 1901, p. 82.

Authority may easily overlook; and further, that as such Grants in Aid cannot fail to influence local policy in one direction or another, they should be so arranged as to give encouragement to expenditure which is deemed, in the national interest, desirable, rather than to expenditure which is deemed undesirable. It is true that in exercising any such discrimination, Parliament and the executive departments may make mistakes. But as they cannot escape from influencing the Local Authorities, it is obvious that they must act upon such light as they have, and must, in particular, particularly avoid making their Grants in Aid operate in a way which they do not desire. Whether all poor relief should be by money doles in the homes, or one or more institutions provided; whether orphan children should be retained in the General Workhouse, or be specially provided for outside that now discredited institution; whether the "common school" (in the sense of one undifferentiated school for all) should be adhered to, or special schools provided for the blind, the deaf and dumb, crippled and the feeble-minded respectively; whether the public money had better be devoted to treating disease, or to some extent at any rate, preferably to preventing it—in all these and many other cases enormous good has been done by judicious encouragement of the wiser course, without in any way interfering with the exercise by the Local Authorities of their discretion to choose either the one course or other, and without depriving them of the advantage of local initiative. We want to leave our Local Authorities free to choose, just as a wise parent leaves his children free to choose. But there is no harm, and on the contrary great gain, in taking care that the choice is exercised with all available knowledge; and experience shows that the choice is more likely to be wisely made if some financial inducement is judiciously thrown into the balance in favour of the course which, whilst benefiting the locality itself here and now, is likely to be of most advantage to the community as a whole and to the locality in the long run. This has even been put as the principal consideration to be kept in view, in deciding on Grants in Aid. "I am strongly of opinion," says Lord Balfour of

Burleigh, "that *the most important point* is to see that the contribution given should bear some relation to the cost of national services, and should be dealt with in such a way as to afford a lever for improving local administration, both in regard to its efficiency and economy."¹

The fourth reason for Grants in Aid is that only by this means can we hope to enforce on all Local Authorities through the kingdom that "National Minimum" of efficiency in local services which we now see to be indispensable in the national interest.² We cannot afford to let the inhabitants of Little Pedlington suffer the penalties of their own ignorance or their own parsimony, because the consequences fall, not on them alone, but also upon the neighbouring districts, upon everyone who passes through their benighted area, upon all those who have intercourse with them, even upon the community as a whole, whose future citizens they are producing. We see this clearly enough when it is a question of infectious disease. We cannot allow Little Pedlington to be free, if it chooses, to have as much small-pox and enteric fever—not to say cholera and bubonic plague—as its inhabitants choose to submit to, rather than take preventive measures which they dislike. We have equally no reason to put up with the horribly bad roads which are all they may wish to pay for. If they are permitted to bring up their children in ignorance, to let them be enfeebled by neglected ailments, and to suffer them to be demoralised by evil courses, it is not the Little Pedlingtonites alone who will have to bear the inevitable cost of the destitution and criminality thus produced. Hence, modern administrative science is forced to recognise that we are all, in the plainest sense, "members one of another."³ The claim for complete local autonomy—for the freedom of the inhabitants of any particular place "to do what they like with their own"—is incompatible with national well-being. We see

¹ *Ibid.*, p. 82.

² *The Necessary Basis of Society*, by Sidney Webb (Social and Political Education League, 1908).

³ See this argument elaborated in *Industrial Democracy*, by S. and B. Webb; see also *Socialism and National Minimum*, by B. Webb.

that there must at any rate be a "National Minimum" in all the elements of civilisation upon which the community as a whole must insist. It follows that the claim of the nation that each locality ought itself to pay for whatever local government it has, necessarily loses most of its argumentative force, if not all its scientific validity. If, for the sake of the community as a whole, Little Pedlington has to undertake preventive measures which its inhabitants dislike, to make roads of better quality than they think necessary, to provide schools and care of the children in excess of what is locally considered sufficient, Little Pedlington has a certain claim to be relieved of part of the cost thus imposed upon it. Especially is this the case if Little Pedlington is relatively poor and already highly burdened. If Little Pedlington's parsimony in public administration is resulting in a rate in the pound actually lower than the average throughout the kingdom, we need not have much scruple in forcing it to come up to the "National Minimum." Usually, however, it is found that Little Pedlington's parsimony springs, in part, from its poverty of resources; and that, inefficient and inadequate as is its public administration, its rate in the pound is at least up to the average of the kingdom. It has then a strong claim not to have imposed upon it, in the interests of the community as a whole, expensive measures which it does not desire, and which will make its inhabitants bear actually more than the average burden. The practical outcome is that (as we see in all directions in the Public Health Service) without a Grant in Aid, the "National Minimum" cannot, in practice, be enforced. But, notwithstanding a whole half century of experience, this fact is frequently not recognised by the framers of legislation or those who report upon the proper conditions for a Grant in Aid. Much of the legislation relating to the protection of infants and the prevention of the neglect and cruel treatment of children, repeated in statute after statute, and now codified in the Children Act of 1908, remains inoperative from this cause. The Legislature has prescribed a "National Minimum" of child nurture. It has specified certain Local Authorities as having the duty of enforcing

the law. But it has made no provision for any supervision to see to what extent, if any, these Local Authorities are taking action; there is no Central Authority to whom they report, and from whom they can receive the stimulus of inquiry and advice; and, finally, there is neither financial encouragement to the necessary expenditure, nor any effective penalty—not even official disapprobation and warning—if no such expenditure is incurred. The result is that, over large parts of the kingdom, the Children Act, like its predecessors, remains a dead letter. The Home Office has been able to secure everywhere the “National Minimum” of County Constabulary, because it was connected with a Grant in Aid. The Home Office has not been able to secure the “National Minimum” of child nurture, which we may presume it to have desired with at least equal keenness, because this was not connected with a Grant in Aid.

It has accordingly become an axiom of political science that, with our English administrative machinery, Grants in Aid of Local Government are indispensable—(i) for any equitable mitigation of the inequalities of burden; (ii) to secure effective authority for the necessary supervision and control of the National Government; (iii) to encourage the kind of expenditure most desirable in the interest of the community as a whole; and (iv) to make it possible to attain to anything like a universal enforcement of the “National Minimum” that Parliament has prescribed. And thus we find such eminent authorities as Lord Balfour of Burleigh, Sir George Murray, and the late Sir Edward Hamilton concurred in declaring “that the system of direct payments from the Central Government to the responsible [Local] Authorities in respect of definite services, and not to particular items of expenditure, affords by far the easiest basis for judicious participation in the solution of administrative problems.”¹

So far from Grants in Aid being objectionable and exceptional, to be restricted to the fewest possible services and to be got rid of as soon as possible, we have to recognise

¹ Final Report (Minority) of Local Taxation Commission (England), 1901, p. 83.

them as a permanent and, if properly arranged, intrinsically valuable part of our constitutional machinery, destined (with suitable financial readjustments and scientifically devised conditions) to wider and wider extension.

III

HOW WE DISTRIBUTE THIRTY MILLIONS A YEAR IN GRANTS IN AID

Few persons are aware of the extent of our Grants in Aid to-day. There seems to be among the official publications, no comprehensive or comprehensible statement setting forth all the various subventions from the Exchequer to the different Local Authorities of the United Kingdom. We owe it to the enterprise of the *Daily News Year Book* for 1911 that such a statement can now be given in a reasonably succinct form.

One difficulty is that we have to consider separately that which is paid by the Exchequer and that which is received by the several Local Authorities. Out of the total of nearly thirty millions a year something approaching twelve millions is paid into the Local Taxation Accounts for England and Wales, Scotland and Ireland respectively; and thence distributed to the Local Authorities, part of it, indeed, to some Local Authorities only as conduit-pipes to other Local Authorities. On the other hand, the Education Grants, the Industrial and Reformatory School Grants, the Distress Committee Grants, and various contributions in lieu of rates are paid direct to the Local Authorities concerned. Moreover, in some cases, the Grants payable to Local Authorities are accompanied by other subventions for similar services paid (as for some Industrial and Reformatory Schools in the United Kingdom, and for all elementary schools in Ireland) direct to voluntary organisations unconnected with Local Government.

The complication of the Local Taxation Accounts dates from 1888, when Mr. (afterwards Viscount) Goschen undertook to simplify the financial relations between the Exchequer and the Local Authorities, and to make their finances mutually independent. With this object, and

altogether ignoring the purposes and results of Grants in Aid to which reference has just been made, he induced the House of Commons to substitute, for the multifarious separate Grants in Aid then borne upon the Exchequer, the assignment of certain revenues (local taxation licences, and a proportion of the Estate Duty), by which, as it was hoped, all Grants in Aid would be met. In that way, it was assumed, the Treasury would be freed from the burden of an uncertain and steadily rising charge, which inconvenienced the framers of the National Budget. From the outset, however, the scheme was applied only to less than half of the total Grants in Aid. The large and growing Education Grants and the less important Grants for Industrial and Reformatory Schools, together with the miscellaneous contributions in lieu of rates, etc., were left untouched. The Treasury was accordingly not freed from the inconvenience and uncertainty caused by the varying annual increases in the Grants, whilst the mutual independence of central and local finances was in no way secured. And the arrangement was promptly upset in other respects. A large addition was made in 1891 by the assignment to the Local Taxation Accounts of the equivalent of the increased duties on beer and spirits, which were allocated among the Local Authorities on a new and perplexing basis, which nobody understood. Five years later came the Agricultural Rates Act of 1896, under which a certain class of property (agricultural land apart from farm buildings) was to be assessed at half its annual value only; whilst in lieu of the annually increasing deficiency of income thus caused to the Local Authorities, a fixed sum was to be paid to the Local Taxation Accounts for distribution upon yet another basis of allocation. We need not trouble to mention minor changes, or the Scottish and Irish equivalents of what was done for England and Wales, which have together brought the total receipts of the Local Taxation Accounts from a little over seven millions in 1889-1890 to nearly twelve millions in 1911-1912; and yet have left the Local Authorities, as they with some force contend, financially in a worse position than they were in at the former date.

We now give the sums paid to the Local Taxation Accounts in 1908-1909.¹

	England and Wales.	Scotland.	Ireland.	United Kingdom.

² Paid from the Exchequer.

³ Collected by the County and County Borough Councils in England and Wales, to which Authorities the collection was transferred on January 1st, 1909.

⁴ The Estate Duty Grant for Ireland is first paid into the Land Purchase Guarantee Fund, and only so much of it as is not required for meeting charges on that fund is transferred to the Local Taxation Account. £54,352 was retained by the Fund in 1908-9. This sum is included in the table.

⁵ To the Cattle Pleuro-Pneumonia Account for Great Britain.

How exactly the money is paid out of the Local Taxation Accounts, and especially on what basis the several Grants are allocated among the different Local Authorities, seems past all finding out. We know that at least six different bases of allocation are employed, for England and Wales alone; and several others for Scotland and Ireland. The score of different Grants in Aid are often allocated in such a way that one neutralises the other. A Local Authority getting a relatively large share of one Grant, because of the poverty of the district, will get a relatively small part of another Grant, because some different basis has been used. A Local Authority refused any share of one Grant because a particular service is not up to the prescribed "National Minimum" of efficiency, will nevertheless be receiving a share of another Grant, expressly with a view to its maintenance of that service. Here, at any rate, is a statement giving the headings under which the issues are paid, together with the amounts as they stood in 1906-1907, which is the latest return that I have at hand:—

SUMS RECEIVED BY LOCAL AUTHORITIES IN ENGLAND
AND WALES DURING THE YEAR 1906-7 OUT OF
MONEYS CARRIED TO THE LOCAL TAXATION ACCOUNT.

<i>Purposes.</i>	<i>Amount.</i>
Salaries of Teachers in Poor Law Schools and School Fees for pauper children sent from Workhouses to Public Elementary Schools	£24,946
Higher Education	820,469
Police (including Police Pensions) ...	2,443,869
Maintenance of Pauper Lunatics in County and Borough Asylums, Regis- tered Hospitals, and Licensed Houses	847,572
Salaries of Medical Officers of Health, Sanitary Inspectors, and Inspectors of Nuisances, and awards to Public Vac- cinators	194,516

Remuneration of Poor Law Medical Officers, and Costs of Drugs and Medical Appliances (Metropolitan Unions only)	57,213
Grant to Guardians of extra-Metropolitan Unions based on the cost in 1887-8 of Officers of Unions and Poor Law School Districts (including Poor Law Medical Officers and the Cost of Drugs and Medical Appliances)	973,896
Other Specific Services	10,336
In aid of Rates for County Purposes, including Maintenance of Main Roads	1,523,056
In aid of Rates in County Boroughs ...	280,978
In aid of other Rates	1,148
In respect of the deficiency caused by the provisions of the Agricultural Rates Act, 1896, in the produce of Rates of :	
County Councils	433,663
Rural District Councils	354,137

			£98,021
			£1,143,007

PAYMENTS OUT OF THE LOCAL TAXATION (IRELAND)
ACCOUNT FOR THE YEAR 1908-9.

<i>Purposes.</i>	<i>Amount.</i>
<i>I.—Estate Duty Grant:—</i>	
Department of Agriculture (Horse and Cattle Breeding)	£5,000
To County, etc., Councils, as Road Authorities	105,790
To County, etc., Councils, on behalf of Boards of Guardians (Poor Relief) ...	102,046
	£212,836
<i>II.—Exchequer Contribution:—</i>	
To the Local Government Board for the purposes of the Labourers Acts ...	£6,000
To Board of Works in discharge of Loans to Rural District Councils for Labourers Acts purposes	30,812
To County Boroughs in aid of Rates ...	3,188
	£40,000
<i>III.—Agricultural Grant (less £1,850 deducted under Land Purchase Acts) ...</i>	£725,805
<i>IV.—Customs and Excise Duties:—</i>	
Intermediate Education Board	£9,806
Department of Agriculture and Technical Instruction	78,000
	£87,806
<i>V.—Licence Duties and Local Grants:—</i>	
One-half Salaries of Medical Officers ...	£62,918
One-half Salary of one trained Nurse in each Workhouse	3,000
Salaries of Schoolmasters and Schoolmistresses in Workhouses	7,910

One-half Cost of Medicines, etc.	...	12,945
L.G.B. Pharmacist		150
One-half Salaries of Sanitary Officer	...	18,407
Accommodation and Maintenance of Lunatics		193,294
In aid of Guarantees for Railway and Harbour Charges		14,422
		313,046
		£1,379,493

Apart, however, from all the Local Taxation Accounts, we have the far larger Grants in Aid administered by the Board of Education for England and Wales, the Scotch Education Department, and the Commissioners of National Education in Ireland. These Grants, dispensed among a dozen different heads, amount apparently, for the United Kingdom (including the Grants to "National" schools and voluntary training colleges in Ireland), to more than sixteen millions a year. It adds to the confusion that besides this large sum other Grants for education are issued out of the Local Taxation Accounts, as already described, to the extent of some £900,000 for education other than elementary (the so-called "whiskey money")—now to be temporarily made up of a larger sum—£24,946 for teachers in Poor Law Schools, etc., £264,868 for various kinds of education in Scotland, and £87,806 and £7,910 for other kinds in Ireland.

EDUCATION GRANTS.

ENGLAND AND WALES.

I.—Public Elementary Schools:—

Annual Grants		£5,652,431
Aid Grants		2,445,839
Free Grants		2,662,066
Special Grants to certain Local Authorities		201,648
Grants for Blind, Deaf, Defective, and Epileptic Schools		77,296
Pensions and Gratuities to Teachers	...	113,037

Special Grants for the building of new Public Elementary Schools	21,815

Grants to Training Colleges	40,000
	£1,520,000¹

We have yet to mention another educational subvention, namely, the Grants payable under the Industrial and Reformatory Schools Act, now codified in the Children Act of 1908. By an historical anomaly these schools are supervised, not by the Board of Education, but by the Home Office. They are payable either to Local Education Authorities maintaining such schools, or to bodies of voluntary managers who relieve the Local Authorities of this work. The figures are as follows (for 1906-7):—

INDUSTRIAL AND REFORMATORY.

ENGLAND AND WALES.

Industrial Schools	£122,464
Day Industrial Schools	5,484
Truant Schools	6,223
Reformatory Schools	74,043
	£208,214

¹ Approximate only; being that portion of the total expenditure which is paid to bodies of Managers, etc., who in Ireland do the work elsewhere entrusted to Local Education Authorities.

£106,342

The total issues from the Exchequer in respect of education of all kinds must, I believe, in the current year, 1911-2, approach pretty nearly to twenty millions sterling.

There remain certain anomalous payments. Among these are the contributions in aid of the expenses of the Central (Unemployed) Body for London and the District Committees in 120 other towns, acting under the Unemployed Workmen Act of 1905. These—our modern recognition, in the most foolish way, of what is called the “Right to Work”—amounted in 1906-7 to £219,065 for England and Wales, £47,253 for Scotland, and £13,750 for Ireland, a total of £280,068. Then there are the contributions in lieu of rates on Government property (£548,732 in England, £29,406 in Scotland, and £57,386 in Ireland) and the rates payable on the houses occupied by the foreign legations (£8,017). These are perhaps not properly to be regarded as Grants in Aid. Whether or not we should so regard the £10,000 a year that the Treasury pays towards the Metropolitan Fire

Brigade, the £90 annually contributed towards the repair of the interesting stone bridge over the Tweed at Berwick,¹ and the numerous subventions of this sort in Ireland, may be less open to question.

We may now present a final summary, which still excludes some items:—

SUMMARY OF SUBVENTIONS TO LOCAL AUTHORITIES IN 1908-9.

	England and Wales.	Scotland.	Ireland.	United Kingdom.
Money passing through Local Taxation Ac- counts	£ 8,565,626	£ 1,143,427	£ 1,444,857	£ 11,153,910
Education Grants Reformatory and Industrial Schools	12,918,033	1,967,870	1,520,000	16,405,903
Grants under Unemployed Workmen Act, 1905	188,000 ¹	62,000 ¹	106,342	356,342
Contributions in lieu of Rates, etc.	219,065	47,253 ¹	13,750	280,068
	540,000 ¹	28,000 ¹	56,000 ¹	624,000
	22,430,724	3,248,550	3,140,949 ¹	28,820,223

¹ Approximate Figures.

The corresponding total for the current year, 1911-2, cannot yet be ascertained; but I doubt if it falls far short of thirty millions sterling.

How exactly these large Grants affect each particular Local Authority in England and Wales, Scotland and Ireland, cannot be discovered from any published figures. We may infer from the statistical totals that the net result of the thirty millions of Grants in Aid—amounting to about 3d. per head of population per week—is to reduce the rates, *on an average* by about 2s. 4d. in the £, making them only two-thirds of what they would otherwise have been. The ratepayer pays, in the United Kingdom, in

¹ As to this see *The Manor and the Borough*, by S. and B. Webb.

round figures, on an assessment (rateable value) of about two hundred and fifty millions, nearly seventy millions a year in rates, or, *on an average*, 5s. 8d. in the £. But for the Grants in Aid he would be paying nearly a hundred millions, or 8s. in the £. All such averages are, however, entirely delusive. The relative amount and the actual operation of the Grants is very different in the three kingdoms. Even within each kingdom the circumstances of parishes, boroughs, and counties differ enormously. Some parishes in the United Kingdom find their rates reduced, by the operation of the Grants in Aid, to next to nothing. Other parishes, at the further end of the scale, are paying in rates more than 15s. (occasionally, in the Hebrides, more than 20s.) in the £.¹ It would be a good thing if some Member of Parliament would ask the Chancellor of the Exchequer to supply, for England and Wales, Scotland and Ireland respectively, tables similar to that published by the London County Council for the London parishes as to the effects of the various "Equalisation Funds,"² showing for each rating area the rateable value per head of population (as a convenient index of its poverty) and the amount in the £ by which the several Grants in Aid actually reduce the local ratepayers' burden. The inequalities and absurdities which such a table would reveal would prove a cogent argument for the promised reforms. We shall see something of them in the following chapters.

¹ See, on this point, *The Inequality of Local Rates*, by Prof. E. Cannon (*Economic Journal*, 1896).

² See the annually issued *London Statistics*.

IV.

THE GRANTS IN AID OF THE POOR LAW AUTHORITIES

THOSE who have patience to unravel the complications and explore the anomalies of the existing Grants in Aid may be recommended to take, as a choice example of the results of ignoring in this matter all political science, and of relying on mere rule of thumb, the Grants in Aid of the Poor Law Authorities in England and Wales, Scotland and Ireland, of which the details have been made accessible by the labours of the recent Royal Commission on the Poor Laws.¹ We shall find among the various Grants in Aid in this department of the public service, instances of everything to be avoided, as well as a few suggestions of what to adopt for the future.

The Grants in Aid received by the Poor Law Authorities amount, in the United Kingdom, to nearly three and a half millions sterling per annum, or between one-fifth and one-sixth of the total expenditure connected with the relief of the poor under the Poor Laws. But they differ so considerably in their amount, in their kind, and in their conditions, among the three parts of the United Kingdom, that we can only consider their effects by taking them separately.

(A) *England and Wales outside the Metropolis.*

The Grants in Aid receivable by the Boards of Guardians in England and Wales now amount to more than

¹ Report of Royal Commission on the Poor Laws, etc., 1909, especially Minority Report, Part I., ch. 9, p. 320, of 8vo edition of the Blue-book, from which most of this chapter has been taken.

£2,600,000 sterling annually, payable in five separate grants.¹

GRANTS IN AID RECEIVABLE BY BOARDS OF GUARDIANS
IN ENGLAND AND WALES.

Grant.	Amount in 1907-8.
Fixed Grant under Local Government Act, 1888 (Sec. 43 for London Unions, Sec. 26 for those elsewhere)	£1,350,000
Fixed Grant under Agricultural Rates Act, 1896	461,000
Four shillings per head per week for lunatics in asylums, etc.	800,000
Payments in respect of teachers in Poor Law schools	25,000
Repayment of school fees paid for children sent from workhouses to public elementary schools	2,000
	£2,638,000

In considering the effect of these Grants in Aid on the administration, we must omit, for the moment, the Boards of Guardians of the Metropolis, where the position is further complicated by an internal system of local equalisation of rates and the existence of a federal Poor Law Authority.

(i.) *The Relief to the Local Ratepayers.*

Taking first the relief afforded outside the Metropolis to the local ratepayer, we have to note that, owing to the arbitrary manner in which the two principal fixed Grants were allocated, and the changes that have taken place in the last two decades, the amount and the proportion of the relief varies enormously from Union to Union, and that it bears no relation whatever to the policy or to the relative efficiency and economy of the Boards of Guardians. The amount by which the rates are lowered owing to the whole

¹ Evidence before Poor Law Commission, Appendix III. of Vol. I.

of these Grants in Aid appears to be less than 1d. in the £ in the Fylde Union; less than 2d. in the £ in the Lancaster and Bootle Unions; and less than 3d. in the £ in some other Unions. On the other hand, owing to these same Grants in Aid, the ratepayers in the little Caxton and Arrington Union find their burdens lightened by nearly 1s. 6d. in the £; and those in Fordingbridge and Anglesea Unions by more than 1s. in the £. In the little Union of Longtown the total Grants in Aid now amount to over 58 per cent. of the expenditure of the Board of Guardians; in that of Belford they amount to over 50 per cent.; whilst in some other Unions they come to over 40 per cent. On the other hand, in the Bedwellty Union the whole of the Grants in Aid are less than 13 per cent. of the expenditure; in the King's Lynn Union they come to less than 15 per cent.; and in the Unions of Bury St. Edmunds and Great Yarmouth, to less than 18 per cent. The result is that the Poor Rates vary from less than 3d. in the £ in the Fylde and Garstang Unions, up to more than 2s. in the £ in the Mildenhall, King's Lynn, Risbridge, and Carnarvon Unions. The Minority Report of the Poor Law Commission observes, with some justice, that "whatever may be thought of the policy of contributing a sum of £2,600,000 in relief of the payers of Poor Rate in England and Wales, we cannot conceive of any argument that would justify the continuance of such gross and entirely arbitrary inequalities between Union and Union, not in any way dependent on the conduct of the local administrators, as the present system involves."¹

(ii.) *Discrimination in favour of Desirable Expenditure.*

The second effect of Grants in Aid may be to encourage particular forms of expenditure as compared with others. Here we must ignore the two fixed Grants which are, in effect, made in aid of the Guardians' funds generally, however these are expended. The three smaller Grants vary according to the amounts expended by the Boards of Guardians on particular services, and thus tend

¹ Minority Report Poor Law Commission, 1909, p. 322.

to encourage the growth of these services. One of these Grants, that for the payment of school fees, has, with the almost universal adoption of free schools, become of trivial amount. Another, that towards the salaries of teachers in Poor Law Schools, whilst still serving to encourage the Boards of Guardians to staff these schools with more qualified teachers,¹ has, with the continuous tendency to cede the educational work connected with pauper children to the Local Education Authorities, become of little consequence, and may even tend to discourage the most approved methods of dealing with pauper children. The other Grant, that of 4s. per head per week for every certified pauper lunatic placed in a proper asylum under the care of the Lunacy Authority, still has important results.

By paying the Grant only for such persons as have been transferred to lunatic asylums, etc., and withholding it in those cases in which the person of unsound mind is retained in the General Mixed Workhouse, Parliament and the Central Authority have striven to encourage that elimination of lunatics from the workhouse which is so desirable. Under this encouragement, the number of paupers of unsound mind in the asylums in the County and Borough Councils has risen from 16,369 in 1859 to 85,990 in 1906. So far the Grant may be said to have attained its object. It has, however, as has been forcibly represented to successive Commissions, three grave defects. It offers a standing inducement to Boards of Guardians to get people certified as persons of unsound mind who are not really lunatics or idiots, merely as a means of getting rid of them from the General Mixed Workhouse, and obtaining the Grant in respect of them.² It was brought to the notice of the Poor Law Commission that some Unions, particularly those in which additional workhouse accommodation would otherwise have to be provided at great cost, make a practice of sending to the costly "mental hospitals" of the County and Borough Councils a large

¹ Final Report of Local Taxation Commission (England and Wales), 1901, pp. 82-3.

² *Ibid.*, p. 82.

number of aged men and women who are suffering only from the feeble-mindedness of senility, and who ought not properly to be certified to be of unsound mind. This result is due, in great measure, to the arbitrary separation of some classes of mentally defective persons from others; to the putting of some under the Lunacy Authorities and leaving others to be dealt with only by the Poor Law Authorities; and to the confining of the Grant in Aid to some only of these classes of the mentally defective whilst withholding it from others. On the other hand, where there is ample workhouse accommodation, the sum of 4s. has proved insufficient to bribe the Boards of Guardians to remove even those who are really lunatics or idiots from the General Mixed Workhouse. Especially in the country workhouses, where the actual expenditure per head on food and clothing is only 4s. or 5s. per week, there is, even counting the 4s. grant, still a considerable additional expenditure to the Union involved in sending the lunatic or idiot to the County Asylum, where the charge made to the Board of Guardians is usually about 12s. per week. Hence, as the Commissioners themselves saw in their visits, and as was testified by numerous witnesses, many lunatics and idiots are still, out of motives of mere parsimony, kept in the General Mixed Workhouse, where they mix freely with the other inmates, even with the children, where they are often the cause of annoyance, sleeplessness, and disgust to their associates, and where they themselves can neither be scientifically treated nor properly cared for. The number of certified lunatics and idiots in the General Mixed Workhouses has, in the last fifty years, even increased from 7,963 in 1859 to 11,151 in 1906. Owing to the insufficiency of the rate this grant of 4s. per head per week has therefore failed—and still fails—to get the ordinary Board of Guardians to see the necessity of doing anything more than “relieve the destitution” of the harmless lunatic or the village idiot, who accordingly remains in the General Mixed Workhouse, to his own hurt and the annoyance of the other inmates.

The third defect of the Lunacy Grant is of another

character. By a condition, for which it is difficult to see any reason at all, the grant of 4s. is only allowed in those cases in which the weekly cost of the lunatic's maintenance, *after deducting sums recovered from relatives, or otherwise*, is not less than this sum. The result is that if, as is usually the case, the asylum charge is 12s. a week, a Board of Guardians is under no inducement to get relations to contribute more than 8s. a week, as anything more than that will not benefit the Board of Guardians or the local ratepayer. Nay, more; if the relations pay a shilling or two per week more than will just leave 4s. to be borne by the Union, the Union will actually lose by their liberality, as it will have to bear the whole balance itself, and will not be able to draw the 4s. grant. The result is that the relations' contribution tends to be restricted as a maximum to what will just leave a balance of 4s. to be borne by the public. Every Guardian must have heard cases discussed by Boards of Guardians in which, for this very reason, the amount to be contributed by relations has been deliberately restricted. Incidentally, this course serves to maintain the stigma of pauperism in cases where the lunatic's estate or relations could furnish direct to the Asylums Committee the entire cost of maintenance. It is not generally known that, if this were done, the patient need no longer be classed as a "pauper lunatic."

It is accordingly clear that there is, on several grounds, the most urgent need for an alteration in the Lunacy Grant. And whilst the selection for a special Grant in Aid of the particular service of providing for certified lunatics and idiots has led to these equivocal results, no attempt has been made so to arrange the Grants in Aid as to encourage other developments which the Local Government Board has been, for several decades, pressing in vain on the Boards of Guardians. Whilst wishing devoutly to get the children out of the General Mixed Workhouses, the Local Government Board has (outside the Metropolis) made no suggestion that any Grant should be made dependent on the number of children more properly provided for. Whilst striving continuously to get the provision for the sick

brought more up to the level of contemporary hospital administration, the Local Government Board has (outside the Metropolis) made none of the Grants bear any proportion to the expenditure on Poor Law infirmaries, or the maintenance of the sick poor, nor made any of them conditional on the local arrangements for medical attendance and nursing attaining what its Inspectors report to be an adequate standard. The result, as the Royal Commission reported, is that a large proportion of Unions fall, in these respects, deplorably short of even a decent provision. "I can only account," said Mr. Davy, Chief General Inspector to the Local Government Board, "for the fact that the Grant has been allowed to remain as it is by the fact that there are three bodies responsible for it; I mean to say the Home Office, the Lunacy Commissioners, and the Local Government Board . . . I think it can be demonstrated that it has resulted in a loss to the ratepayers."

(iii.) *Giving Authority to Central Control.*

Let us now examine the Grants in Aid of the expenditure of the English Boards of Guardians from the point of view of securing, for the nation as a whole, its proper influence on the Local Authorities. What authority does this sum of two and a half millions annually give to the suggestions, criticisms, and orders made for the promotion of efficiency and economy by the Local Government Board? The Royal Commission found that in practically the whole realm of Poor Law expenditure no use was or had been made of the Grants in Aid as a means of affording the much-needed additional strength to the directions of the Central Authority. In this important respect the existing Grants in Aid are—with the partial exception of the small sum in respect of teachers' salaries—entirely useless. The two fixed Grants (amounting to £1,350,000), and even the 4s. a week for lunatics and the trifling recoupment of school fees, are made in no way dependent on the Boards of Guardians fulfilling, as a whole, even

¹ Report of the Royal Commission on the Care and Control of the Feeble-minded, 1908, Vol. VIII., p. 283.

their statutory obligations, let alone attending to any criticisms of the Local Government Board. A Board of Guardians may be flatly defying the Local Government Board—refusing to build a Poor Law Infirmary, when the mortality in the overcrowded insanitary workhouse is excessive, retaining the children without segregation in the General Mixed Workhouse, giving or refusing Outdoor Relief against the whole spirit of the authoritative Orders, stinting the Medical Officer in salary and drugs, and appointing an altogether inadequate staff of nurses—and the Local Government Board has, nevertheless, unquestioningly to watch a huge Grant being paid over, amounting often to half the total expenditure which is being thus incurred in the locality in defiance of its authoritative criticism and advice. Thus, the present Grants in Aid of the Boards of Guardians stand, in this respect, wholly condemned. There can be no justification whatever for the community as a whole having to provide this large proportion of the expenditure of Local Authorities who, as many Boards of Guardians do, deliberately and persistently disobey the instructions, or flout the authoritative recommendations of the Central Authority which Parliament has established in order to get carried out the policy decided on by the community as a whole. A locality that, to the detriment of efficiency, rebelliously insists on its own autonomy, should, at least, be left to bear its own burdens.

(B) *The Metropolis.*

In the Metropolis, the arrangements with regard to the Grants in Aid receivable by the Boards of Guardians are even less satisfactory than elsewhere. In addition to the two fixed grants, and the 4s. grant for lunatics and the grant for teachers that we have described, the Metropolitan Boards of Guardians receive also what are, in effect, two additional Grants in Aid, by the operation of the Metropolitan Common Poor Fund and the existence of the Metropolitan Asylums Board. By the former arrangement, the cost of certain specified parts of the Poor Law

administration in each Metropolitan Union (the salaries, etc., of officers, the net cost of lunatics in the country asylums, the maintenance of paupers other than children in the workhouse or infirmary to the extent of 5d. per day, the maintenance of children in Poor Law schools or "boarded out," the erection as well as the maintenance of the casual wards, and the whole cost of medicines and surgical appliances) was made chargeable to a common fund, which was provided annually by equal assessment according to the rateable value of each Union. This has a twofold effect. To every Union in the Metropolis, rich or poor, it amounts to the same thing as a Grant in Aid in respect of the particular services charged on the fund, each Board of Guardians being credited with more if it develops those particular services rather than other services. But as the fund is raised by precepts on all the Unions according to rateable value, the two-thirds of the Unions that are relatively poor receive an actual subvention of some £400,000 a year in aid of their general funds and in relief of their local rates. The total amount charged on the Common Poor Fund now approaches one and three-quarter millions sterling annually, being one-third of the total expenditure in the Metropolis under the Poor Law. Much the same financial effect is produced by the existence of the Metropolitan Asylums Board, an independent Authority which maintains, not only asylums for pauper idiots, and schools for pauper children suffering from ringworm, ophthalmia, etc., but also, under the Public Health Acts, hospitals for infectious diseases, maintenance in which is now, by statute, not deemed Poor Law Relief. As the expenditure of the Metropolitan Asylums Board, now exceeding a million a year, is now, in effect, all levied on the Unions in proportion to their rateable value, and not in proportion to the use that they severally make of its various institutions, these institutions are, in effect, open to Boards of Guardians gratuitously; that is to say, no Union and no Board of Guardians pays more because it sends more cases. Thus, to the extent that they relieve each particular Board of Guardians of the cost of maintaining pauper idiots, pauper children, or

patients in the infectious diseases hospitals who would otherwise be paupers, the existence of these virtually free institutions is equivalent to a Grant in Aid, though at the expense of the London ratepayers generally, to that Board of Guardians for these particular services.

The effect of these elaborate, complicated, and very extensive Grants in Aid upon the finances of the Metropolitan Boards of Guardians can only be described as extraordinary. They amount, in the aggregate, to no less than 70 per cent. of the total Poor Law expenditure of the Metropolis.¹

(i.) *The Relief to the Local Ratepayers.*

Taking the various Grants in Aid together, the relief thereby afforded to the local ratepayer in the different Unions varied in 1907-8 from as much as 3s. 5d. in the £ in St. George's-in-the-East, 2s. 4d. in the £ in Bethnal Green, over 2s. in the £ in Stepney, and 1s. 9d. in the £ in Poplar, down to practically nothing in Wandsworth and Hammersmith. On the other hand, the Grants in Aid to half a dozen of the Metropolitan Unions, whilst financially assisting certain forms of relief as compared with others, resulted (owing to the "equalisation" provisions) in a positive increase of the Poor Rate, which involved an additional charge of a few pence in the pound, and in the City of London Union of as much as 7d. in the £. The Boards of Guardians of St. Saviour's, Southwark, St. Pancras, and Bethnal Green find themselves bearing locally less than a quarter of what (apart from their fixed quota to the Common Poor Fund) they themselves spend in Poor Relief, whilst the Board of Guardians of the City of London Union bears a burden equal to the cost of all the Poor Relief that it dispenses. The Rate that has actually to be levied for the relief of the poor in the different Unions (in addition to a uniform 9d. in the £ for the Common Poor Fund, and 5d. in the £ for the Metropolitan Asylums Board) varies from less than 2d. in the £ in the Westminster Union and less than 4d. in the £ in the Paddington, St. George's, Hanover Square, and

¹ Evidence before Poor Law Commission, Appendix No. XXVIII. (par. 57) to Vol. I.

Hampstead Unions, up to as much as 1s. 6d. in the £ in Hammersmith, 1s. 8d. in the £ in Mile End Old Town and St. George's-in-the-East, and to as much as 2s. 6d. in the £ in Poplar—even after Poplar has been aided to the extent of 1s. 9d. in the £.

(ii.) *Discrimination in Favour of Desirable Expenditure.*

Turning now to the influence exercised by these Grants in encouraging or discouraging particular services or forms of relief, we notice that the throwing upon the Metropolitan Common Poor Fund of the cost of all the Poor Law officers and 5d per day per adult indoor pauper, including those in the Poor Law infirmaries, and the omission of any similar subvention to Outdoor Relief, afford a considerable encouragement to Indoor as compared with Outdoor Relief. Whatever may be thought of this result in the abstract, we cannot avoid the conclusion that it is largely due to this peculiar arrangement of the Grants in Aid that the Metropolitan Boards of Guardians have been induced to incur enormous expenses for the erection and maintenance of gigantic Workhouses and Poor Law infirmaries, and that the whole cost of Poor Relief in London, however computed—whether per pauper, per head of population, or per £ of rateable value—is proportionately far in excess of that incurred in any other part of the kingdom. Similarly the placing upon the fund of the whole cost of maintenance of the Poor Law Schools, and refusing all subvention to children in the workhouse, whilst distinctly discouraging the retention of children in the General Mixed Workhouse, has greatly promoted the development in the Metropolitan Unions of the most costly of all the alternative methods of providing for the children, namely, the residential school. It is a minor consequence of the arrangement of the Metropolitan Grants in Aid that they actually discourage the provision of proper accommodation for children who are sick. As the Poor Law infirmaries are technically workhouses, the establishment in these institutions of the most ideal ward for sick children brings no Grant, whilst

if the sick children are sent to, or retained in, the Poor Law residential schools, where they ought not to be, the whole of their cost is borne by the Common Fund. Finally, we may observe that the effects of the Grants in Aid in actually restricting the contributions of relatives, that we have already described outside the Metropolis in the case of the Lunacy Grant, *is seen in London to operate over the whole field of indoor pauperism*. Instead of allowing each Board of Guardians to retain, for the benefit of its own ratepayers, whatever sums could be recovered from relatives of paupers in the workhouses, Poor Law infirmaries and residential schools—which would seem to be the course most calculated to encourage the exaction of such contributions—all such contributions have now to be credited to the Common Poor Fund, in which the pecuniary interest of any particular Union is small and scarcely noticeable. The result, as the Royal Commission was informed, is to check the efforts that the Boards of Guardians might otherwise make to exact contributions where these ought to be paid. The throwing upon the Fund of the whole expense of the Casual Wards and of the relief of Vagrants has the effect of discouraging any particular Board of Guardians from attempting, by the maintenance of a strict regimen, to deter persons from applying to its Casual Ward; and at the same time does nothing to discourage any Board from maintaining so lax a regimen as to attract to its Casual Ward as many Vagrants as it will hold. The arrangements for persons of unsound mind amount, in effect, to relieving each Board of Guardians of the whole cost of this class of paupers, and throwing the cost upon London as a whole, provided they are sent, either as lunatics to the asylums of the London County Council, or as imbeciles or idiots to those of the Metropolitan Asylums Board. There is, accordingly, a great encouragement to get these paupers (and any others whom the doctors can be induced to certify as of unsound mind) out of the workhouses, but no encouragement to any proper discrimination between those who should be sent to the institutions of the London County Council and those who should be sent to the institutions of the

Metropolitan Asylums Board; with the result that, whilst all Metropolitan Boards of Guardians get what seems to be an unduly large proportion of their workhouse inmates certified as persons of unsound mind, some of them class these predominantly as lunatics and others predominantly as imbeciles or idiots.

(iii.) *Giving Authority to Central Control.*

On the most important point of all, the extent to which the Grants in Aid enable due control to be exercised over the expenditure, the position in the Metropolis is, with regard to one of the Grants, a shade better than elsewhere. The fact that the approval of the Local Government Board is required to the charging of any item to the Common Poor Fund would seem, in theory, to give that Department an opportunity for exercising a really effective control over all the branches of expenditure charged to the Fund. So far as the matter is not governed by statute, it would seem as if, by refusing to sanction the charging to the Fund of officers' salaries otherwise than according to the scale which is prescribed, or of the cost of any Casual Ward not maintained in exact accordance with its regulations, or of the fivepence per day each for indoor paupers in any Workhouse that is overcrowded, the Local Government Board ought to be able, in the Metropolis, to attach a sanction to its instructions and suggestions that is elsewhere lacking. The Royal Commission was not convinced that the Local Government Board had made the fullest use of the power which its control of the Metropolitan Poor Fund afforded. When we learn that, however disobedient and recalcitrant during all these past forty years has been a Metropolitan Board of Guardians, however scandalously overcrowded and insanitary its Workhouse, however gross the scandal of its "barrack school," however harsh or however lavish its policy of Outdoor Relief, however lax its Casual Ward, however deficient its arrangements for the sick poor, *never once—as Sir Hugh Owen informed the Royal Commission,*¹ without apparently seeing how gravely he was condemning the

¹ Evidence before Poor Law Commission, Q. 14818-14820.

whole system—has the Local Government Board made use of the power entrusted to it by statute of declaring the Board of Guardians to be in default, and of withholding its share of the Common Poor Fund, we can hardly avoid agreeing with the Royal Commission. Whether by reason of some defect in the regulations, or of some defect of organisation in the Local Government Board itself, it is clear that practically no use has been made of the potent instrument of Grants in Aid as a means of giving authority to the central control that, on paper, exists. On the other hand, the fact that so enormous a proportion of the expenditure of Metropolitan Boards of Guardians is borne otherwise than by the rates that they themselves impose, and that the conditions of most of the subventions received by them are so framed as to give no control to the Authority by which they are paid, will unquestionably have had an even greater effect in encouraging lavish expenditure than is elsewhere the case. On all counts, therefore, the present arrangements for the Grants in Aid of the Metropolitan Boards of Guardians—good as they were in their intention—must be condemned as nothing short of fantastic in their absurdities, and grossly inequitable in their results.

(c) *Scotland.*

The Grants in Aid of the Parish Councils in Scotland, which amount to £244,000 a year, or nearly one-fifth of the total expenditure connected with the Poor Law, are, in many respects, analogous to those of Boards of Guardians in England and Wales.

GRANTS IN AID OF THE EXPENDITURE OF PARISH COUNCILS
IN SCOTLAND.

Grant.	Amount in 1907-8.
Fixed-Grant to Parish Councils in respect of the deficiency in the Poor Rates arising from the operations of the Agricultural Rates (Scotland) Act, 1896	£58,500
Relief of Rates Grant (total fixed)	50,000
Poor Law Medical Relief Grant (total fixed)	20,000
Lunacy Grant (total fixed)	115,500
Total	£244,000

There is the same kind of fixed Grant in respect of the deficiency of revenue arising from the operation of the Agricultural Rates Act, a Grant which, as in England and Wales, is now essentially one in aid of the expenditure generally. There is a second Grant of £50,000 made in relief of the local rates, and distributed among the Parish Councils, and thereby differing from all the Grants in England, Wales, and Ireland, partly in proportion to their valuation and partly in proportion to their population. This, too, so far as any relation to the Parish Council expenditure is concerned, is a fixed Grant. There are two other Grants, now received, like those of England and Wales, out of the Local Taxation Account, which, though fixed in total for Scotland as a whole, are allotted among the Parish Councils in proportion to their expenditure on particular services. Thus, the Poor Law Medical Relief Grant of £20,000 a year is annually distributed among such Parish Councils as have complied with the prescribed regulations, which include the appointment of legally qualified medical officers at fixed salaries, and the expenditure of at least a prescribed minimum amount on Medical Relief. The Grant is distributed in such a way as first to defray practically half the cost of the trained sick-nursing in Poorhouses, and then to be shared *pro rata* according to the total expenditure of the various parishes on Medical Relief. This comes, in effect, to a Grant to each Parish Council of about one-quarter of its expenditure on that service. Similarly, the Lunacy Grant, fixed at £115,500, is shared among all the Parish Councils *pro rata*, according to the total net expenditure incurred on the maintenance of pauper lunatics, not exceeding 8s. per week. This comes, in effect, to a Grant to each Parish Council of about two-fifths of its expenditure on pauper lunatics.

We have now to consider what is the result of this system of Grants in Aid of the expenditure of the Scottish Parish Councils, in the three ways of reducing the burden on the ratepayer, encouraging one service rather than another, and strengthening the influence for efficiency of the Central Authority.

(i.) The Relief to the Local Ratepayers.

We note, to begin with, the same extraordinary diversity and inequality in the relief afforded to the local ratepayers as in England and Wales, but carried even to greater extremes, as Lord Balfour of Burleigh has pointed out.¹ "One Scottish parish may by some fortunate circumstance have within its boundaries an amount of rateable property out of all proportion to its needs, while another may be composed of property which represents a rateable capacity inadequate for the barest needs of civilisation. For instance, the parish of Temple, in Midlothian, has a gross valuation of over £44 to each inhabitant, whilst Barvas, in Ross and Cromarty, has only 9s. per inhabitant, and a penny rate will, therefore, produce nearly 100 times as much per inhabitant in Temple as in Barvas." This inequality is frequently not mitigated, but actually increased, by the distribution of the subventions from the National Exchequer. To quote again Lord Balfour of Burleigh: "The parish of Ettrick, in Selkirk, which is almost wholly agricultural, has an assessable value of nearly £20 per inhabitant, and is, in this respect, one of the wealthiest parishes in Scotland. Its expenditure upon Poor Relief is equal to 9s. 4d. per inhabitant, an amount which is considerably above the average for the whole of Scotland, but which, owing to the high assessable value, would involve a rate of less than 6d. in the £, even if it received no assistance from central funds whatever. Notwithstanding these circumstances it receives Grants (including those under the Agricultural Rates, etc., Act) from the Local Taxation Account amounting in the aggregate to more than one-half of its expenditure, and representing 5s. 1d. per inhabitant—one of the largest amounts, if not the largest amount, throughout Scotland. Of the total it appears that about one-quarter, or 1s. 2d. per inhabitant, is derived from the 'Grant in relief of parochial rates,' and with this and the other Grants the Poor Rate is reduced to less than 3d. in the £.

"The parish of Old Monkland (Lanark), which is partly

¹ Final Report of Local Taxation Commission (Scotland), 1902, p. 33.

within the burgh of Coatbridge, has less than one-quarter of the assessable value per inhabitant possessed by Ettrick, and administers its Poor Relief much more economically, having an expenditure equal to only 4s. 2d. per inhabitant, or less than one-half of the amount spent in Ettrick. But notwithstanding the more restricted resources and greater economy in Old Monkland, the parish only receives Grants amounting to 8d. per inhabitant, a sum which is only just over one-half of the amount granted to Ettrick under the head of 'relief of rates' alone, and is left with a rate of 8 $\frac{3}{4}$ d. in the £."

Since 1902, the date of Lord Balfour of Burleigh's Report, the inequalities seem to have become even more extreme. There are more than fifty parishes in Scotland to-day in which the result of the Government Grants, quite irrespective of parish property or "mortifications," church collections or voluntary contributions, is to relieve the local ratepayer of more than one-half of the burden of Poor Relief—in nearly a dozen cases going so far as to enable a Poor Rate on occupiers to be entirely dispensed with. On the other hand, the ratepayers of the little parish of Glendevon (Perthshire) only got, in 1906-7, £1 in Government Grants towards their expenditure of £32; those of Stranraer (Wigtownshire) only £126 towards an expenditure of £1,283; those of Blantyre (Lanarkshire) only £492 towards an expenditure of £4,720; whilst those of Glasgow, Leith, and Aberdeen on the one hand, and Polwarth (Berwickshire), Dalziel ((Lanarkshire), and Kirkintilloch (Dumbartonshire) on the other, found themselves relieved only to the extent of one-seventh or one-eighth of their respective burdens. As a consequence it may occasionally happen that in a particular year, a fortunate Parish Council may need to levy no Poor Rates at all, either on owners or occupiers, as was actually the case with the Dunsyre (Lanarkshire) Parish Council, though without either "mortifications" or voluntary collections, in 1906-7, whilst nine other parishes had no rate on occupiers and only a fraction of a penny on owners; and whilst hundreds of other parishes found their Poor Rates reduced to only a few farthings or a few pence in the £, the Parish

Council of Barra (Inverness-shire) had a Poor Rate of 9s. 6d. in the £ (4s. 2d. on owners and 5s. 4d. on occupiers); that of Lochs (Ross and Cromarty) one of 12s. 3d. in the £ (5s. 9d. on owners and 6s. 6d. on occupiers); that of Barvas in the same county one of 13s. 8d. in the £ (5s. 8d. on owners and 8s. on occupiers).¹ Such stupendous inequalities, dependent as they are on the assessable value of the parishes, bear no relation to the relative population, area, or industrial character of the parish—still less to the economy or efficiency of the Parish Council—and need only be stated to be condemned.

(ii.) *Discrimination in Favour of Desirable Expenditure.*

With regard to the encouragement of particular services or particular forms of relief rather than others, we may note that, in Scotland, a much larger proportion of the total Grants in Aid of the expenditure of the Parish Councils is framed so as to achieve this end than is the case with the Boards of Guardians in England and Wales. Of the total sum of £244,000, more than half is accounted for by the Lunacy Grant of £115,500 and the Medical Relief Grant of £20,000. The Lunacy Grant, which began in 1875, is so framed as to encourage the certification of paupers as being of unsound mind, as the larger the proportion of lunatics among its paupers, the larger is the Grant in Aid that the Parish Council receives. It is not without significance that the lunatic poor, who, between 1868 and 1875, had remained nearly stationary at between 1.8 and 1.9 per 1,000 of the population, have, since the year in which the Lunacy Grant was first payable, increased by leaps and bounds, the proportion rising from 1.9 in 1875 to no fewer than 3.1 in 1907 per 1,000 of the population. Whereas in 1875 only 64 out of every 1,000 paupers were certified as of unsound mind, there were in 1907 no fewer than 139 out of every 1,000 so certified.² This Lunacy Grant is not, as it is in England

¹ Thirteenth Annual Report of Local Government Board for Scotland, Cd. 4142, 1907, pp. 153-193.

² *Ibid.*, p. xi.

and Wales, payable only for such persons of unsound mind as are maintained in lunatic asylums, but is payable for all persons of unsound mind maintained by the Parish Councils, whether in asylums, in poorhouses, or "boarded out," with regard to whom the General Board of Lunacy are satisfied that proper care and treatment are afforded. Notwithstanding this payment of the Lunacy Grant for lunatics still retained in the General Mixed Poorhouse, to which there is so much objection, we must, in fairness, record that the General Board of Lunacy insists on there being separate "licensed wards," and that a much smaller proportion than in England and Wales of the pauper lunatics—in fact, only 782 out of the 15,031—are so retained in Scotland, partly, perhaps, because 2,771 are "boarded out." We may entirely accept the official testimony that "the result of the Grant," under the watchful supervision and the incessant suggestions for amendment of the General Board of Lunacy, "has been a great improvement in the care of the insane." But as a principle of public administration it seems objectionable that, owing to the selection of this one section of the pauper host for a heavy Grant in Aid, there should be so great a temptation offered to Parish Councils to get poor persons certified as of unsound mind.

The Medical Relief Grant has less equivocal features. Here, indeed, as in the English Police Grant, we have an example of a Grant in Aid operating—because framed upon sensible lines—in such a way as enormously to increase the efficiency of the service selected for encouragement. By means of the deliberately contrived scale of minimum expenditure on the medical service, as well as the requirement (which had not been embodied in any statute as to Poor Relief) that there should be a salaried doctor, which alone entitled a Parish Council to participate in the Grant, its distribution was prevented from being merely a dole to the ratepayer. By making the Grant to each Parish Council, not in proportion to its population or valuation but directly proportionate to its own actual expenditure on Medical Relief, with an additional bonus for the provision of trained sick nursing in the Poorhouses,

the Central Authority effected "an immediate and lasting improvement in the administration of Poor Law Medical Relief, outdoor and indoor," from one end of Scotland to another. "By means of the Grant, a system of trained sick nursing has been established in Poorhouses; schools of training Poor Law nurses have come into existence; and recently the system has culminated in State Certification of Poorhouse nurses after three years' training and a high-class examination. The whole system of Indoor Medical Relief has thus been greatly improved." It is interesting to find the Local Government Board for Scotland itself making it a matter for congratulation—very natural, if rather prematurely optimistic—"that the best Poorhouse sick wards are now as well staffed as the wards of any first-class general hospital."

Unfortunately, the Medical Relief Grant has one accidental defect. In 1889, when this Grant was, with others, merged in the Local Taxation Account, it was provided that it should be distributed according to the scale and regulations then in force. This statutory enactment has had the unintended effect of stereotyping the regulations of twenty years ago, so that certain parishes are now unfairly excluded from participation in the Grant, and, moreover, it has not been possible to enlarge its scope so as to encourage such new developments as salaried nurses for the outdoor poor and probationer nurses in the Poorhouses, or to amend certain technical defects which experience has revealed. What is required is merely to enable the Local Government Board for Scotland to revise the scale and the regulations from time to time.¹

It is to be regretted that in no branch of the Scottish Poor Law other than Lunacy and Medical Relief have the Grants in Aid been made to work an equally beneficent improvement. Thus, there is no financial encouragement to the Scottish Parish Councils, as there is to the London Boards of Guardians, to provide for their pauper children otherwise than in the General Mixed Workhouse or

¹ As to the Medical Relief Grant see Report of Departmental Committee . . . on Poor Law Medical Relief (Scotland), Cd. 2022, 1904; Final Report of Local Taxation Commission (Scotland), Cd. 1067, 1902, pp. 15-18.

Poorhouse. The result is that notwithstanding the prevalent belief that Scottish pauper children are nearly all "boarded out," there are to be found in the Poorhouses of Scotland at any time a very large proportion of children under 16, numbering, indeed, on March 31st, 1906, no fewer than 1,845; whilst in London, with a greater population and a greater amount of pauperism, but under the operation of financial encouragement of the removal of children from the workhouse, there were on March 31st, 1906, only 174 children under 16 in the workhouses (other than sick), and only 965 in the sick wards of workhouses, making only 1,139 in the General Mixed Workhouses altogether.

(iii.) *Giving Authority to Central Control.*

Passing now to the third effect of Grants in Aid, the extent to which they strengthen, in the interests of efficiency and economy, the influence of the Central Authority, we need add little to what we have already said. Half the total Grants are, as we have seen, flung out in such a way as to do nothing to improve the relationship of the Local Government Board for Scotland with the Parish Councils. The Lunacy Grants gives the Central Board of Lunacy the power to see that the care and treatment of the pauper lunatics are up to a minimum standard, and thus lends a certain amount of weight to its criticisms and suggestions. The Medical Relief Grant has enabled the Local Government Board to get a salaried Medical Officer appointed to attend to the poor of nearly every parish, and to get trained nurses appointed in many Poorhouses, including all the larger ones, but the accidental stereotyping of the regulations of 1889 has prevented the making of further requirements. But, for the most part, the beneficent influence of these Grants has operated automatically from the conditions under which they are payable, rather than from any increased weight that they have given to the influence of the Central Authority.

(D) *Ireland.*

The Grants in Aid of the expenditure of Boards of Guardians in Ireland, which amount to £528,000 a year,

being no less than 40 per cent. of the total expenditure, offer few points of difference from those in England and Scotland.

GRANTS IN AID OF THE EXPENDITURE OF BOARDS OF GUARDIANS
IN IRELAND.

Grant.	1907-8.
Fixed (Agriculture) Grant to Boards of Guardians in respect of the deficiency arising from the operation of Clause 48 of the Local Government (Ireland) Act, 1898...	£316,731
One-half of Estate Duty Grant (Sec. 3 of Probate Duties (Scotland and Ireland) Act, 1888); total not varying in any way dependent on Boards of Guardians, and allocation among Unions fixed on basis of 1886-87	126,055
Medical and Educational Salaries Grant ...	85,996
Total	£528,782

There is the same kind of fixed Grant in respect of the deficiency caused by the relief afforded to the owner of agricultural land, a Grant which, as in Great Britain, is now essentially one in aid of expenditure generally. There is a second Grant in Aid of expenditure generally, varying in total amount according to the yield of the Estate Duties, but in no way dependent on any action of the Board of Guardians, and allocated among the various Unions in a ratio that was fixed, once for all, in 1886-7, and has now ceased to bear any relation to the relative expenditures. These two Grants, amounting to no less than £442,786, or 86 per cent. of all the Grants in Aid, have thus the effect of lump sum subventions in aid of the local expenditure, of which they amount, on an average, to as much as one-third. The third Grant, that in aid of medical and educational salaries, is now limited in total; but, as with the Medical and Lunacy Grants in Scotland, this fixed maximum sum is allocated among the Boards of Guardians

in proportion, to some extent, dependent on their own expenditure. The Boards of Guardians may claim for recoupment one-half the duly approved salaries of their medical officers of workhouses and dispensaries; one-half the cost of medicines and of medical and surgical appliances, obtained in accordance with the regulations; half the salary of one trained nurse in each workhouse; one-half the remuneration of substitutes of doctors or nurses absent on vacation; and the whole of the duly approved salaries of schoolmasters and schoolmistresses in workhouses. But, by a provision of the Local Government (Ireland) Act of 1902, the maximum sum to be received by any Board of Guardians under these heads was fixed at what it actually paid under these heads in 1901-2, so that an enterprising Board, which had then already attained the low minimum standard imposed, may presently find that it has little or no financial encouragement to effect further improvements. Moreover, under the Local Government (Ireland) Act of 1898, it was provided that if the total sum provided for this Grant proved insufficient to meet the claims, the Grants payable to each Union were to be proportionately abated. This, in fact, happens now every year, so that the amounts payable to each Union (like the Scotch Medical and Lunacy Grants) bear each year a smaller proportion to the Guardians' expenditure on the services which it was desired to encourage. It should be added that the maintenance of persons of unsound mind in lunatic asylums is, in Ireland, entirely divorced from the Poor Law and from pauperism. There is a Grant of £160,000 made direct to the County Councils in aid of this service at the rate of 4s. per week per lunatic, or one-half the net cost if this is a smaller amount.

(i.) *The Relief to the Local Ratepayers.*

Coming now to the results of these Grants in Aid of the expenditure of the Irish Board of Guardians, we find them, in respect alike of the relief to the ratepayer, of the encouragement of particular services, and of the strengthening of the influence for efficiency of the Central

Authority, almost exactly parallel with what we have already described for England and Scotland. There are the same heedless inequalities in the extent of the relief afforded to the ratepayers of different Unions, entirely irrespective of their circumstances; whether the test be population, area, poverty, amount of pauperism, efficiency of service, or economy of administration. These inequalities between the relief thus afforded to the Irish occupiers appear all the more inexcusable when we realise that it is the unfortunate districts of the West, where it may almost be said that chronic starvation prevails, which are most unfairly dealt with. Throughout the whole of Ireland the Government Grants are arranged almost as if it had been deliberately designed that those districts which needed help most should receive the least assistance, whilst those which required the least aid had this aid heaped upon them in profusion. The Poor Law Commission Report gives us the following instructive table of figures for six of the richest and six of the poorest Unions in Ireland¹:—

Union.	County.	Death Duty Grant, 1906-7.	Medical and Teachers' Grant, 1906-7.	Agricultural Rates' Grant, 1906-7.	Total Grants in Aid, 1906-7.	Population, 1901.	Valuation, 1906.	Valuation per Head.	Grants per Head.
		£	£	£	£		£	£ s. d.	s. d.
Dunshaughlin	Meath ...	399	332	2,383	3,114	7,979	105,242	13 4 0	7 9
Trim ...	Meath ...	485	408	3,568	4,461	13,973	109,054	7 16 0	6 4
Celbridge ...	Kildare ...	579	456	2,122	3,157	14,225	106,057	7 9 0	4 5
Delvin ...	Westmeath	316	250	1,717	2,283	8,477	53,200	6 6 0	5 4
Croom ...	Limerick	597	402	2,677	3,676	10,806	63,836	5 18 0	6 9
Kilmallock ...	Limerick	1,477	757	6,104	8,338	25,551	140,273	5 10 0	6 1
Glenties ...	Donegal ...	669	539	1,059	2,267	33,191	22,314	0 13 0	1 4
Dunfanaghy	Donegal ...	364	194	392	850	15,781	12,036	0 15 0	1 0
Belmullet ...	Mayo ...	504	304	765	1,573	13,845	10,942	0 16 0	2 3
Oughterard ...	Galway ...	393	366	921	1,680	17,732	16,053	0 18 0	1 10
Swineford ...	Mayo ...	758	490	2,123	3,371	44,162	42,374	0 19 0	1 6
Clifden ...	Galway ...	507	370	1,020	1,897	18,768	19,010	1 0 0	2 0

We learn, therefore, that in the Dunshaughlin Union, amid the rich grazing lands of Meath, where the valuation

¹ Report of Royal Commission on the Poor Laws, etc., 1909, Majority Report.

amounts to no less than £13 4s. per head of population, the Government relieves the occupier from his burden of local expenditure to the extent of as much as 7s. 9d. per head. In the Dunfanaghy Union, amid the bare rocks of Donegal, the Government relieves the occupier of his local burden to the extent of no more than 1s. per head. There are unfortunate Unions in the West, in which the inhabitants are habitually unable to earn a living (such as Glenties, Swineford, and Caherciveen) where the total of Government Grants in Aid of the expenditure of the Board of Guardians on Poor Relief does not amount to a third of its cost—these Unions being aided no more than is flourishing Belfast. On the other hand, in some of the districts of Ireland where the valuation per head is highest (such as Dunshaughlin, Delvin, Croom, and Celbridge), the fortunate Board of Guardians finds that it has to bear only one-fifth of the amount that it chooses to spend. Nor have these enormous inequalities any relation to the policy, to the efficiency, or to the extravagance of the different Boards. Among the Unions where pauperism is relatively high, and the numbers on Outdoor Relief are most considerable, we find the names of those (such as Kilmallock, Navan, and Croom) in which the Government Grant is relatively the largest. The result is that whereas some Unions, richly endowed by the Government Grant, and spending in Poor Relief two or three times the average for the whole country, escape, whatever their extravagance, with a Poor Rate on occupiers of 6d. or 8d. in the £; others—by what seems almost like a bitter irony—those where the soil is poorest, have (like Belmullet and Dingle) to bear a burden, notwithstanding a starved administration costing only a third or a fourth as much per head as that of some other Unions, of between 3s. and 4s. in the £. It is difficult to see any excuse for the continuance of so anomalous and so unfair a distribution of the Government Grants, to which pointed attention was called in 1902 by Lord Balfour of Burleigh, Sir E. W. Hamilton, and Sir G. Murray, without any reform being effected; to which renewed attention was called by the Vice-Regal Commission on Poor Law Reform in Ireland in 1906; and

to which the Royal Commission on the Poor Laws referred in scathing terms in 1909.¹

(ii.) *Discrimination in Favour of Desirable Expenditure.*

In the matter of the encouragement of particular services, the expansion of which is considered desirable, the Grants in Aid of the expenditure of the Irish Boards of Guardians are so arranged as to have the very minimum of effect. Four-fifths of the sum thus paid by the Government has no such discriminating effect at all. The remaining fifth—the Medical and Teachers' Grant—had originally a considerable influence in the improvement of the Medical and Educational staffs of the Union. But owing to what seems to have been a wholly mischievous change in 1902, when the expenditure of that year was stereotyped as the limit of the Grant which no Union might hereafter exceed, however much it subsequently developed its medical and educational services, the beneficial effect of the Grant in this respect has diminished, though it still serves as a stimulus to prevent the most backward Unions from sinking below the minimum. There is no financial encouragement given to the Irish Boards of Guardians to provide for their pauper children otherwise than in the General Mixed Workhouse, where they are usually taught as well as boarded and lodged; there is, for instance, no Grant paid in respect of children boarded out or placed in certified schools; there is no financial encouragement to them to provide more than the minimum of nursing in the workhouse; there is no financial encouragement to them to give relief to the sick, the widows, or the aged and infirm in one way rather than another.

(iii.) *Giving Authority to Central Control.*

On the last, and in some ways, the most important, feature of Grants in Aid, the extent to which they are

¹ Report of Vice-Regal Commission on Poor Law Reform in Ireland, 1906, Vol. I., p. 68; Final Report (Ireland) of Local Taxation Commission, Cd. 1068, 1902, pp. 24-27; Minority Report of Poor Law Commission, 1909, p. 339.

arranged so as to strengthen the influence for efficiency of the Central Authority, the Grants to the Irish Boards of Guardians are always wholly useless. Four-fifths of the Grants are made unconditionally in lump sums. Thus, an Irish Board of Guardians may go to the utmost limit of contumacy; it may violate in the spirit, if not actually in the letter, all the commands of the law, and all the injunctions of the Local Government Board for Ireland; it may be as extravagant in its expenditure and foolishly lavish in its Outdoor Relief as it chooses; it may set at naught all the advice of the Inspectors; its members may be grossly partial, politically biassed and virtually corrupt in their administration—nevertheless the Local Government Board for Ireland must, by law, unquestioningly hand out, year after year, the funds which provide one-third or one-half—sometimes even four-fifths—of what the Guardians are playing with. Such a position needs only to be stated to be condemned. Nor is the matter much better with regard to the remaining fifth of the total Grants, that in aid of the medical and educational salaries, etc. Here the conditions secure that the appointments and salaries shall have had the approval of the Local Government Board, and that the medicines, etc., shall have been procured in accordance with its regulations. But the Grant is not in any way dependent on the efficiency of either the medical service or the workhouse school. The doctor may have got very old or taken to drink; the teacher in the workhouse school may have got worn out in the service and be utterly incapable of keeping the school apace with educational progress—nevertheless the Local Government Board for Ireland must go on paying the Guardians the Grant towards the salaries of officers whom its Inspectors report to have become wholly inefficient.

V

THE GRANTS IN AID OF THE LOCAL EDUCATION AUTHORITIES

The Grants in Aid of the work of the Local Education Authorities deserve separate attention, if only for their magnitude, and for the fact that they have, for the most part, been left outside the Local Taxation Account. As the Education Grants even in 1888 amounted to more than all the rest of the subventions put together, it is plain that their exclusion from the Goschen arrangements condemned these, from the outset, to futility. Beginning, in 1833, with the modest building Grant of £20,000, made almost unconditionally to certain voluntary agencies, the total of these Grants (including all sorts of education subventions, and Scotland and Ireland) now reaches, as far as I can make out, pretty nearly twenty millions sterling annually, and is steadily increasing.

We deal first with England and Wales, in which the total Grants in Aid of Local Education Authorities now amount to over fourteen millions annually. Their most obvious drawback is their extraordinary complexity and lack of uniformity of basis.¹

The Grants which make up the bulk of this vast sum are, in England and Wales, known respectively as

- (a) the Annual Grant;
- (b) the Fee Grant; and
- (c) the Aid Grant.

¹ Most information will be found in the admirable "Memorandum and Tables on Education Grants," published by the London County Council (No. 1217 of 1908). For their early history, see Kay Shuttleworth's *Four Periods*; and Craik's *The State in Relation to Education*.

These Grants are calculated in different ways, with many minor complications.

The Annual Grant is paid under the Code, and is based on the average attendance of all scholars whose attendances are recognised by the Board of Education. The rate of Grant is 22s. for each unit of average attendance, except in an Infants' Department, or an Infants' Division in which the average attendance exceeds 20; in these cases the Grant is at the rate of 17s. per scholar. The Grant is subject to reductions, which do not ordinarily exceed 3s. per scholar. The Grant amounts, on the whole, to an average rate of about 20s. 6d. per scholar, or about a penny per day per child. Thus the Local Education Authorities have a direct pecuniary interest, not only in getting as many children to school as possible, but also in getting them to attend as regularly as possible.

The Fee Grant is paid under the Elementary Education Act, 1891. It is, like the Annual Grant, based on the average attendance, and is at the rate of 10s. per scholar; but attendances made by scholars above 15 years of age are not allowed to be counted for the Grant. The receipt of the Grant imposes certain restrictions on the charging of fees, and a few schools therefore decline the Grant, preferring to charge a substantial fee. There are about eighty such schools at present, but their number is diminishing. In most of the schools receiving the Grant, no fees at all are charged; but where fees are charged the Grant may be subject to deduction if the total amount of the fees so charged has exceeded a certain limit. This limit generally depends on the circumstances of the school in 1890, and therefore is different for each school. This Grant operates as a bribe to making the schools free.

The Aid Grant is paid under Section 10 of the Act of 1902, and consists of two parts, viz. :

(a) A fixed Grant of 4s. per scholar in average attendance;

(b) A variable Grant of $1\frac{1}{2}$ d. per scholar for every 2d. by which the produce of a 1d. rate falls short of 10s. per scholar.

Thus the Grant depends partly on the average attendance, and partly on the produce of a 1d. rate; and the rate of Grant per scholar is higher or lower according as the sum found by dividing the produce of a 1d. rate by the number of scholars is lower or higher. The average rate of Grant is about 9s. 4d. per scholar. The Grant is subject to a reduction if the amount to be raised for Elementary Education would, but for that reduction, be less than the sum that would be produced by a 3d. rate.

There are curious differences between these Grants as regards the method and date of payment. The Annual Grant and Fee Grant are Grants in respect of schools, and the Grants in respect of each school depends on the average attendance during the school year, while the date of payment depends on the date at which the school year ends. An Authority which has schools with different school years will therefore receive payments in respect of Annual Grant and Fee Grant at various dates throughout the year. The Aid Grant is a single Grant, paid for and during the Financial Year ending March 31st, and based on the total average attendance of all schools within the area of each Authority. The average attendance on which Aid Grant is paid during any Financial Year is generally different from the average attendance on which Annual Grant is paid during the same year, and, if there are scholars above the age of 15, the average attendance on which Fee Grant is calculated is different from either of them. Thus, by what seems to be a quite unnecessary complication, the three Grants in question are paid on at least three different figures of average attendance, and the total rate of Grant payable cannot be determined by simply adding together the rates of Grant under each head.

But we have not yet done with the complications. In addition to the Grants mentioned above, there are other Grants paid by the Board of Education, to the same Local Education Authorities, under quite different conditions and at quite different rates. The chief of these is the Small Population Grant, which amounts to £85,000 per annum. It is paid under Acts passed in 1876 and 1880, and consists of a special Grant of £10, £20, or

£25 per school in accordance with the smallness of the population in a given parish, or within a distance of two miles measured according to the nearest road from the school. It affords quite a substantial contribution per child, amounting, in about half the counties, to over 1s. per head. In some half-dozen counties it yields 2s., and in two or three (but these are mostly small areas) from 3s. to 4s., and in Radnor 5s. 4d. per unit of average attendance. The object of this Grant is to meet the increased burden of maintaining schools in thinly populated areas, and although it is at present, as a matter of convenience, paid as part of the Annual Grant, it depends upon different conditions, and is separately calculated, and is in effect an Aid Grant to the Authorities of county areas. This Grant must be considered an arbitrary attempt to counteract, to some small extent, the unfair inequalities produced by the other Grants. There are obvious objections to such a method of proceeding, based partly on the troublesome and unsatisfactory nature of the evidence required to substantiate claims for this special Grant, and partly upon its tendency to continue the separate existence of schools which, upon educational grounds, might well be merged with others.

Then there are the Grants for Cookery, Laundry work, Dairy work, Household Management, and Handicraft, which amount to £100,000 a year, and are given each on its own set of complicated conditions.

The Grants to Schools for Defective and Epileptic Children amount to £27,000, those to Schools for Blind and Deaf Children to £21,000, and those to Higher Elementary Schools to £26,000 per annum, again with their own complicated methods of allocation.

The total of these small Grants is as under :—

Small Population Grants	...	...	£85,000
Special Subjects (Cookery, etc.)	...	...	100,000
Defective and Epileptic Schools	...	...	27,000
Blind and Deaf Schools	...	...	21,000
Higher Elementary Schools	...	...	26,000

Total £259,000

This is less than 2 per cent. of the total Grants in Aid to the Local Education Authorities of England and Wales.

There is still another Grant to be mentioned, called the Necessitous Schools Grant, introduced in 1906-7, for the temporary relief of West Ham and a few other highly rated areas, and continued year by year since that date, with certain perplexing changes at different dates. This is computed on a certain arbitrary basis of child attendance and rateable value, deliberately in order to afford to these few districts a certain measure of mitigation of the extreme inequalities resulting from the operation of all the other Grants, without in any way altering the basis of these Grants.

We must here again mention the Grant of a variable sum (£820,469 in 1908-9), allocated specifically to education other than elementary, paid out of the Local Taxation Account as the proceeds of certain increased duties on beer and spirits (the "whiskey money"). This annually variable sum is allocated among the Local Authorities in an entirely different way from that of all the other Education Grants, each Local Authority receiving a definitely fixed quota of the aggregate for the year, this consequently tending to mitigate or neutralise whatever effect the other Grants were designed to produce. How exactly the allocation takes place no one now understands, but it is believed to depend upon some basis more or less arbitrarily arrived at in 1891, and never since varied.

To this must be added the subventions paid by the Board of Education, under separate and varying conditions in each case, towards the cost of evening schools, student teachers, secondary schools, training colleges, the building of new colleges and hostels, and all the heterogeneous Grants for science, art, and technology classes and scholarships.

Finally there are the Education Grants paid, in some cases to the same Local Education Authorities, through non-educational Central Departments, the £208,214 payable at the instance of the Home Office towards Industrial and Reformatory Schools; the £24,946 payable at the instance of the Local Government Board in respect of the

salaries of teachers in Poor Law schools, etc.; and the £100,000 (now increased to £150,000) payable at the instance of a Treasury Committee in aid of the Universities (apart from Oxford and Cambridge) and University Colleges, including those under municipal control.

So complicated a system of Grants in Aid of education has, of course, been gradually evolved, without any Minister of Education ever having had the courage or the opportunity to place this enormous annual subvention of fourteen millions sterling for England and Wales alone on any scientific, or even any consistent, basis. The three principal Grants, amounting together to 95 per cent. of the whole payments in respect of elementary education, are themselves the gradual outgrowths of varying circumstances. The Annual Grant is itself an amalgamation of various smaller Grants given for varying purposes and in varying amounts under successive Codes. The Fee Grant and Aid Grant are determined by the exact wording of the statutes of 1890 and 1902, and not by the annually revised Code. The Fee Grant is necessarily distinct from other Grants, since the conditions under which it can be paid, reduced, or withheld are different from those applicable to other Grants. The Aid Grant, which dates from 1902, replaced certain special Grants provided by the Acts of 1870 and 1897, the payment of which was not considered to be suited to the new conditions introduced in 1902. The Grant under the Act of 1870 was limited in its effect to certain areas, no Grant being payable where the produce of a 1d. rate exceeded a certain amount per scholar. This Grant was increased in 1897 and became payable to a larger number of areas. The basis of the latter Grant was complicated, as it depended partly on the average attendance, partly on the produce of a 1d. rate, and partly on the actual rate raised during the year. The Aid Grant of 1902 included all areas, and the variation in the rates of Grant was very much less.

Indeed, it cannot be said that much regard has been paid to preventing inequality of local burden. The principle of a Grant designed to assist heavily rated districts is found in the Acts of 1870 and 1897, but the effect of both these

Acts was practically swept away by Section 10 of the Act of 1902. This section appears to rest upon the same principles as those of the earlier Acts, but the basis of relief is so wide that every Education Authority is included, and although the Grant is a variable one, the highest proportion does not necessarily, even if it may incidentally, reach the poorest localities.

The outcome of the whole system is, accordingly, a very great inequality between district and district. We may show this without citing the extreme cases.

There were in 1906-7 157 Authorities with rates under 10d., including fifty counties, thirteen county boroughs, seventy-nine boroughs, and fifteen urban districts; and the total of the rates amounts to £2,542,000. These Authorities received Grants amounting to £4,559,000, so that the proportion of expenditure borne locally by them was 35.6 per cent., and the total cost of education in these areas was £3 3s. per unit of the average attendance, which is 2,253,734. In considering these figures, it must be remembered that they are averages, and that the counties include such places as Durham, where the total cost is £2 16s. 10d. per scholar, out of which the locality pays only 16s. 10d., or 30 per cent., and Middlesex, where the cost per scholar is £3 12s. 2d., of which £1 18s. 8d., or 53 per cent., is raised locally. Still greater inequalities occur in the boroughs.

There were in 1906-7 ninety-seven Authorities whose rates ranged between 10d. and 1s. 3d., including ten counties, thirty-eight county boroughs, thirty-eight boroughs, and eleven urban districts. The total raised locally by these Authorities was £2,438,000, and this amounted to 46.2 per cent. of the total cost. The Grants amount to £2,841,000, or 53.8 per cent. of the expenditure, which averages £3 14s. 9d. per scholar on the 1,411,561 in average attendance. The counties in this section include Stafford, where the average cost is £3 5s. 3d., and Surrey, where it is £4 3s. 8d.; the county boroughs include Dudley with an average of £2 18s. 4d., and Hastings with £5 5s. 2d.; and the boroughs include Hornsey with £6 17s. 6d.

There are seventy-one Authorities whose rates were, in 1906-7, over 1s. 3d., including three counties, twenty-one county boroughs, twenty-one boroughs, and twenty-six urban districts. London is included in the counties, and the other areas comprise East and West Ham and all the highly rated districts. Here the total amount raised locally was £4,772,688 against £3,210,963, or 40.2 per cent. of Grants. The proportion raised by rates is thus nearly 60 per cent. The average cost per scholar is £4 18s. 9d., on an average attendance of 1,616,642. In London the cost per scholar is £5 18s. 3d., towards which only £1 7s. 11d. is paid in Grants, so that £4 0s. 4d., or 67.9 per cent., is raised locally. In West Ham the total average cost per scholar is £4 18s., or for a family of three £14 14s., which is more than the total rates collected from the average house in the borough, to meet all the services of Local Government. Other towns with high rates for elementary education are Aberdare, Aston, Barry, Bilston, Burslem, Carlisle, Chesterfield, Ebbw Vale, Edmonton, Halifax, Handsworth, Kettering, Merthyr Tydvil, Norwich, Oldham, Pontypridd, Tottenham, West Hartlepool, and Wolverhampton, in all of which the burden is either nearly 2s. in the £ or above that figure. On the other hand no county (except the Scilly Isles) pays more than 1s. 2d. in the £, and Herefordshire pays only 4½d.

We may, however, recognise in the Education Grants, with all their complications and with all their failure to promote a proper equalisation of burden, some marked superiorities over the Poor Law Grants. The greater part of the Education Grants are not mere doles, fixed in amount, flung at the Local Authorities whether or not their services are performed or not, and irrespective of the amount of work done. With the exception of the anomalous "whiskey money," the Education Grants are, in England and Wales, all conditioned on the schools being maintained in efficiency, and they are accordingly liable to be withheld or reduced if the Minister for Education thinks fit. They are, moreover, for the most part, made to vary roughly with the amount of work done, either by being made dependent on the number of children in

average attendance, or on the provision of schools without fee, or of schools for special classes, or of instruction in special subjects, or else on the building of new schools, training colleges, hostels, etc. In this way they not only give authority to central control, but also stimulate and promote expenditure in the particular ways thought desirable, rather than in other ways. All this is to the good. The example of the Education Grants shows us, indeed, how potent is the instrument of the properly devised Grant in Aid in securing the real enforcement of the "National Minimum." How otherwise could we practically have secured, in every part of Great Britain, a reasonably efficient free school within reach of every boy and girl? How otherwise could we have got every Local Authority to enforce even a reasonable regularity of attendance? How otherwise could we have attained the steady rise in this "National Minimum" which the past forty years have witnessed? Unfortunately, the lever of the Grant in Aid is still lacking with regard to medical inspection and treatment; with regard to the enforcement by the Local Education Authorities of the provisions in the Children Act relating to children of school age; with regard to adequate provision for scholarships; with regard to University education, and what not. The Education Grants in Aid fail mainly in not being based on a systematic principle; in not securing adequate "equalisation"; in not sufficiently protecting the most necessitous districts; and in not extending over the whole field.

One final absurdity, peculiar to the Education Grants, must be mentioned. Not only is each Grant for elementary education paid over separately, apart from any other Grant to the same Local Authority, but also, frequently, each Grant in respect of each school! Though the Grants are in aid of the total expenditure of each Local Education Authority in England and Wales, and are in no way earmarked for particular schools, each Local Authority receives throughout the year a stream of separate "credits" on the Paymaster-General from the Board of Education for relatively small sums, each of an odd amount, being the exact sum calculated to be due in respect of each

particular Grant for that particular school. Thus, although there are only some 20,000 schools and institutions to be paid for, and only 327 Local Education Authorities to be dealt with, the Grants in Aid now involve, it is said, the issue of something approaching 100,000 separate "credits" or advices, addressed to the Paymaster-General, but sent to the Local Education Authorities, employing, in their preparation, a huge staff of experienced clerks at great expense. Down to three or four years ago, a separate cheque was actually issued in each case! Some of these advices are now grouped together in one cheque, but even now the payment of the 327 Local Education Authorities of their 327 annual subventions involves literally tens of thousands of separate cheques, which arrive in a stream every few days or weeks throughout the year, at irregular intervals, and not exactly coinciding in dates year by year. Thus the Local Education Authority of Liverpool receives its annual subvention from the Exchequer in the form of about 125 separate orders on the Paymaster-General, two-thirds of them being in respect of elementary education and about one-third in respect of "education other than elementary." Another Local Education Authority, that of London, receives its annual subvention in no fewer than 400 separate cheques during the year, nearly all for odd amounts, of the greatest possible diversity—here a cheque for £4 2s. for a single Grant for a single institute, then one for £16,759 4s. 10d. for some Grant or another on twenty-nine schools, a week later one for £130,397 16s. as an instalment of a particular Grant for all the schools in the county; and presently another for £6,765 10s. for another Grant in respect of eighty-one such schools. Any exact comparison of the total Grant earned one year with another is incidentally rendered impossible by the fact that these innumerable cheques for particular schools do not come to hand on corresponding dates in each year, so that more of them may happen to arrive in one financial year than in the next financial year.

Thus the so-called Annual Grant for each school is paid on the average about six weeks after the close of the school year of that particular school, which differs from that of

the other schools under the same Authority. The figures on which the Grant is to be based are supplied for each school by the Local Education Authorities, and the Grant is calculated in the Office of the Board of Education separately for each school. The Fee Grant, on the other hand, is paid in quarterly instalments. The first three instalments are paid during the school year for which the Grant is payable on the basis of the returns for the previous school year, and the calculation of the total Grant for the year for that particular school is made together with the calculation of the Annual Grant. The total Annual Grant and balance of Fee Grant for each school having been calculated, the amount due in respect of the several schools is paid to the Local Education Authority. Payments are made weekly in batches, and if the Grants for several schools to any one Authority fall due in the same week a single payment is made.

As if in order to secure the maximum of variety, the Aid Grant is paid in two instalments. The first is paid in April at the rate of 4s. per scholar on the average attendance on which the previous year's Grant was paid, and the second as soon after October 1st as the work of the department permits. The total of this Aid Grant for each school in each financial year is based on the average attendance not of that year, but of the school years (different for each school) which ended in the previous financial year.

I hope that I have got all these complications right; but it is impossible to feel sure! One thing is certain. No member of an Education Committee, and no member of the Finance Committee having to control the estimates of an Education Committee, and no Alderman or Councillor responsible for passing them, ever hopes to be able to master the intricacies of the Grants in Aid on which from 35 to 60 per cent. of the income available for its work is based. Quite apart from any question of amount or the inequality of distribution, the Local Authorities have a real grievance in the incomprehensible intricacies and unnecessary complications in which these Education Grants are involved. Even if the Grants must be as complicated

and as multifarious as they are, there is no excuse for the lack of any clear statement of the total amount due, or for the complicated irregularities of the payments. There seems no valid reason why each Local Education Authority should not be regarded as entitled to receive, year by year, one clear and complete statement of account, showing the whole amount payable to it under the various Grants. And instead of the irregular stream of scores or hundreds of separate cheques, coming to hand at the office of each Local Education Authority, at odd times, for odd amounts, needing to be separately sent to the local bank, separately forwarded by that bank to London, separately presented to the Paymaster-General, and separately remitted back to the current account of the Local Education Authority, I venture, with some experience, to affirm that no ground exists why each Local Education Authority should not find paid direct to the London agent of its local bank, to be automatically credited to its current account, on a regular day in each month, an instalment of the total subvention that will be payable to it under all heads; the monthly instalments being in round sums of approximately one-thirteenth of the total for the last preceding year (or last year but one); and a final and additional payment being made for the balance as soon as the whole of the various constituent items can be calculated. Something near to this simplicity and economy already prevails in the very same service in Scotland. The Edinburgh School Board receives all its multifarious Grants from the Scotch Education Department—not, like the Liverpool Education Committee, in 125 cheques in the year, which have to be separately acknowledged, separately entered, separately paid into the local bank, and separately collected—but in no more than twenty-six instalments *which it finds automatically placed directly to the credit of its current account* at intervals throughout the year; nineteen of these payments being for different instalments of the Annual Grants, three for equal instalments of the Fee Grant, two for instalments to the whole sum due for continuation classes, etc., and two for instalments for what is called the Education Fund Grant. This means, as I estimated, about one-sixteenth of the

labour involved in the process of payment to Liverpool by the Board of Education for England and Wales!

With regard to the allocation of the Education Grants in Scotland among the 900 School Boards, the complications and inequalities appear to be analogous to those of England and Wales even if less great; but want of space compels me to spare my readers the details. In Ireland there are no Local Education Authorities as regards elementary education; and Grants are paid to the managers of voluntary schools, on a system, in a way, and to an extent of which few persons in this country have knowledge. It is desirable that some inquisitive Member of Parliament should ask the Government to present a comprehensive return showing the total amount receivable from the Exchequer, in aid of any form of educational work, by each Local Education Authority or School Board or other public body exercising educational functions in the United Kingdom, and the basis of allocation or conditions upon which such grant or subvention is made; together with similar information with regard to each school (whether day or evening, elementary or secondary, industrial or reformatory), training college, technical institute, university, university college, or other body not being a Local Governing Authority, similarly subsidised from the Exchequer. I believe that the total would be found now to approach twenty millions, and the variety and complexity of conditions to be even greater than this chapter has sought to reveal.

VI

THE LINES OF REFORM

THE preceding chapters will have made it clear why—quite apart from the clamour of Local Authorities eager for increased subventions—the whole system of Grants in Aid needs overhauling. To eager social reformers, or those concerned with any particular measure, it may not seem at first sight that there is any real hurry in such a technical matter as reforming our present financial arrangements between the Local Authorities and the National Exchequer. In reality, in the interest of social reform, there is perhaps nothing more urgently needed. We have already a whole batch of legislation, vitally affecting the condition of the people, which Parliament has put on the Statute Book, but which Local Authorities up and down the country are most inadequately carrying out, because of the imperfections of our Grants in Aid. Any competent revision on scientific lines of the financial relations between Local Authorities and the Exchequer could hardly fail to mean (*a*) a great advance in public health administration in backward districts, especially as regards phthisis, maternity, and infancy; (*b*) a further onward stride in education, including medical treatment and provision of what is required for necessitous children; (*c*) extensive developments in the case of the feeble-minded and mentally defective; and (*d*) a quickening of the whole local administration. It is our absurd and antiquated system of Grants in Aid that stops the way; and Mr. Lloyd George is therefore right in promising (1911) immediate reform.

On what lines ought reform to proceed? The subject is one which, by the very nature of the case, can be dealt

with effectually, and with full knowledge, only by the Government, to which alone all the relevant facts can be exactly known. To anything like enough acquaintance with the situation as a whole, the present writer can make no pretence. To suggest, under such circumstances, any scheme of reform is necessarily to expose oneself to criticism, if not to ridicule. Yet the only way to sum up the conclusions to which the student of the subject is led is to present them definitely in the form of such a scheme. For this reason, with full consciousness of its necessary imperfection, the following detailed proposal is submitted.

We must, in the first place, put in a plea for the adoption of some intelligible principle. No small part of the evils of the present system has been caused by our scornful neglect of any consistent principle, and our willing acquiescence in a mere "rule of thumb" arrangement for dealing with the exigencies of the moment. It is essential, too, on all grounds, that the question should be dealt with as a whole. To deal only with this or that Grant in Aid would be only to perpetuate the present chaos. This chaos, indeed, is due mainly to this very failure to grasp the question as a whole, even more than the lack of consideration with which the several Grants have from time to time been made. The desire to relieve the local ratepayer, or to bring new sources of revenue to the aid of rates on occupiers, has obscured the real purpose of Grants in Aid, namely, effecting a greater geographical equalisation of burdens and, still more important, strengthening the control of the community as a whole over local parsimony or local extravagance. Moreover, it would be fatal once more to forget the fact that each Grant in Aid necessarily affects, by its amount, its geographical allocation, and its conditions, the psychological and financial effects of all the grants to the same Local Authority that are already in existence. To confine the re-arrangements, for instance, to the twelve millions of the Local Taxation Accounts, without dealing also with the eighteen millions outside those accounts, would be to equalise with one hand, and neutralise that

equalisation with the other. What does it profit a poor district if one Grant in Aid is so adjusted as to lighten its burden, when other Grants in Aid remain allocated in such a way as actually to increase its burden more than proportionately? Any attempt merely to reform this or that Grant, without dealing with all the Grants, would stand condemned and would deservedly fail.

The question may be raised whether, seeing that the Agricultural Rates Act represented, in a sense, a national settlement with the landowners (though the Act, be it remembered, was only passed for a fixed term of years), the sum now payable to the several rating Authorities, in respect of the deficiency arising under the Agricultural Rates Act—commonly called the Agricultural Rates Grant—can properly be included in any re-allotment of Grants in Aid. Personally, I see no reason why it should not be dealt with exactly like the other Grants in Aid. This contention has the high authority of Lord Balfour of Burleigh, Sir George Murray, and the late Sir Edward Hamilton, whose lucid argument on the subject may be appended. "The circumstances which we have thus briefly indicated," they state in their Minority Report (Ireland) of the Royal Commission on Local Taxation, "point with irresistible force to the desirability of a redistribution of the aid to Local Taxation given from the Imperial Exchequer. With regard to most of the existing Grants, such a proposal would meet, we believe, with ready concurrence. But the case of the Agricultural Grant, which is by far the largest item, may appear at first sight more doubtful, and needs careful consideration.

"In the provisions of the Irish Local Government Act, 1898, as to the Agricultural Grant, there is no limit of time, and consequently it might be supposed that any modification of the whole arrangement would be a sort of breach of faith. We think it is possible to draw some distinction.

"The feature of the Act, which was of the nature of a bargain, and which is irrevocable, was this: That, whereas landlords had hitherto paid half the Poor Rate, they should, in future, be relieved of that liability. . . . This

relief was given for various reasons, but more especially in consideration of the risks which a more representative system of Local Government in Ireland would undoubtedly bring to them. Consequently, all rates in rural districts (as well as most urban rates) are to be henceforth paid by occupiers, and this arrangement is admittedly beyond alteration.

“At the same time it was provided by the Local Government Act that the rates in respect of agricultural land should be relieved to the extent of the Agricultural Grant. We do not consider that it is desirable or practicable to depart from the general policy of that Grant; but we do not think it can be assumed that the arrangements as to the aggregate, and especially the distribution of the Grant, are fixed to the last penny for all time. Indeed, demands have already been made for the increase of the Grant, in order to bring it up to date. And, while the distribution is not, in our opinion, satisfactory at present, it may, owing to various possible changes in local finance, become grossly absurd. For instance, if the valuation of any district was considerably increased or diminished—as it probably should be in some cases—the rate in the £ would be altered, and the Agricultural Grant, based on the standard year, 1896-7, might become very anomalous. A considerable increase of buildings or railways might have a similar effect, or such a result might follow from changes of administration. Thus, if a Union which has hitherto been very profuse in poor relief were to change its policy, it is not outside the bounds of practical possibility that the Agricultural Grant might be enough to cover more than the whole charge on the land. Or, if the other subventions in any district were varied, the rate would vary, and the Agricultural Grant would again become anomalous. Again, if it is held impossible to vary the distribution of the Agricultural Grant, it would seem equally impossible to alter the distribution of any other Grant, for the effect on the ratepayers would be just the same.

“Now, we are of opinion that, as between ratepayers, the relief afforded to the occupier of agricultural land by the Local Government Act was equitable, and should be

continued, on the ground that the ability as measured by the occupation of the land is less than the ability represented by the occupation of other property of equal annual value. We, therefore, propose that henceforth, as at present, the rate on agricultural land should be in each area less than the rate on other property by half the standard rate. If the position of the agriculturist be thus safeguarded, we hope that this further proposition may be admitted, viz., that the Agricultural Grant ought not to be regarded as an inalienable endowment of particular districts and particular ratepayers, but that equitable revision from time to time, as fairness and administrative policy demand, is legitimate and necessary.”¹

Similar considerations, it is clear, apply with equal force to the Agricultural Rate Grants in England and Wales, and Scotland. Whether or not it is just and proper to continue the beneficial arrangements as to the assessment of agricultural land at only half its value, or the payment by the occupier of only half-rates upon it, whichever system is found most convenient, there is clearly no obligation on the part of Parliament to continue to pay, *in one way rather than in another*, the Grant which it made to Local Authorities in 1906-7 in respect of the deficiency thus arising.

We may go a step further with practically universal agreement. The action taken in 1888 must be undone. If subventions from the Exchequer to Local Authorities are to continue to be a feature of our constitution, what should be given is—as practically all authorities are now at one in declaring—a Grant, not an assigned revenue. The retrograde step taken by Lord Goschen, in superseding Grants in Aid by assigned revenues, must be reversed. The Goschen finance has, by common consent, in this matter, wholly failed. “No separation of Imperial and local finance,” observes Lord Balfour of Burleigh, “has in fact been accomplished. . . . *Nor would such a separation be wholly desirable, it is contended, on the ground that, so long as a complete separation of the*

¹ Final Report of Local Taxation Commission (Ireland), Cd. 1068, 1902.

*functions of the Imperial and Local Authorities is not possible, the duties of the former can be most effectually performed if accompanied by a system of Imperial Grants."*¹ If, instead of such Grants, Parliament assigns specific sources of revenue to the Local Authorities, or dedicate to their use the proceeds of particular taxes, it deprives the community as a whole of part of its public resources without securing to the National Government, in return, any practical means of enforcing upon the Local Authorities that minimum of efficiency which the interests of the community require; and without giving to the National Government that effective backing of its supervision and control, and that effective strengthening of its counsel and advice, without which it is powerless to check local extravagance and local waste. The psychological effect upon the Local Authorities of assigned revenues instead of Grants in Aid is, moreover, wholly to the bad. To a Local Authority the proceeds of assigned revenues soon become regarded as its own property, which it ought to be able to spend at its will as freely as the rates which it levies upon its constituents, or even more so, and yet without the check to extravagance that is supplied by the consciousness of having to face, at the elections, those from whom the money has been raised. In fact, as things are, "the Local Authorities enjoying the Grants in Aid are said to spend them without consideration, and with a recklessness which would be absent if they were dealing with moneys directly provided out of their own pockets. . . . Experience shows that grants do not reduce the rates, these being, as a rule, as high now as before such Grants were in operation. Grants should be given for special purposes, and not in aid of rates generally. . . . At present they are too much given to regard these Grants in the light of doles." Whilst it is desirable that considerable aid should be afforded to the local ratepayers, both for the sake of equalising local burdens and for the sake of strengthening the influence for efficiency of the National Government, it is of the highest importance,

¹ Final Report of Local Taxation Commission (England), 1901, p. 70.

both as a check upon extravagance, and as a means of securing effective popular assent and control, that the Local Authorities, while receiving general assistance from the Exchequer in respect of national burdens they cannot avoid, should feel that the results of their own actions seriously affect the amount of a definite local rate, varying from year to year. With regard to the aid that they get from the National Exchequer, it is desirable that they should feel that it comes as a recognition of the fact that the local service thus aided is one which is performed, not for the locality alone, but, in part at least, in furtherance of the interests of the community as a whole; and that accordingly the community as a whole has a right to satisfy itself, by the inspection of the expert officers of the central departments concerned, that the service is performed at least up to the extent, and with at least the degree of efficiency, that the community may, in its own interests, from time to time prescribe.

We reach now a parting of the ways, at which we must come to a decision which governs the rest of our argument. There are those who contend that the basis of adjustment between the Exchequer and the Local Authorities should rest on a classification of the services performed by the Local Authorities. Some of these services, it is contended, are national in their character, useful to the community as a whole rather than to the locality, "onerous" rather than "beneficial" to the Local Authority concerned; and should, it is contended, therefore, be wholly paid for by the Exchequer. Other services, it is admitted, are advantageous and beneficial to the locality concerned, which may therefore fairly be left to bear its own charges for whatever grade of administration it chooses to indulge in. It follows, though this is often not realised, that no Grants in Aid should be paid in respect of these latter services.

To the present writer this contention, though supported by a whole stream of writers, who seem to have followed almost blindly one on another, appears to be wholly fallacious. It is, to begin with, impossible to make out, with any clearness of principle or consensus of opinion,

what are the services of national and of local benefit respectively. One would have thought that the care of the sick poor, the grant of outdoor relief and the education of the children were, of all services, those most distinctly beneficial to the inhabitants of each locality; and those in which they had most direct interest in developing *at other people's expense*. But no: the Poor Rate and the Education Rate are invariably the first to be declared, by those who argue for this classification of services, essentially "national" burdens, incurred for national ends, and properly chargeable to the community as a whole. One would have thought that the protection of life and property by a local police force—a service so obviously profitable to the inhabitants of the particular locality concerned that they often spontaneously petitioned Parliament to be allowed to tax themselves for it¹—was a service emphatically local in its benefits and in its character. But no: the Police Rate is, by common consent of all who make the distinction, to be deemed a national service. On the other hand, the great service of sewers and embankments and sluices, by which, in the Fen country, a whole province is protected from flooding; or the maintenance of the great sea wall that adds to England the many hundred square miles of Romney Marsh—though of far more than local concern—is universally classified as a local service, to be paid for by the particular parishes immediately benefited. Even the maintenance of the King's Highway, which is, in every locality, used by other than the residents in that locality, and the repair of which is, historically, an immemorial obligation imposed by the community at large, has, until the other day, never be regarded as other than a local service. We see the beginning of a doubt in the curious statement of the Majority of the Royal Commission on Local Taxation that "the maintenance of main roads we also consider, on the whole, to be, to some extent, a national service, and likely to become more so, owing to the increasing mobility

¹ See *The Parish and the County* and *The Manor and the Borough*, by S. and B. Webb, for many instances of these petitions for "Watching" Acts.

of the population and the development of new means of locomotion.”¹

What is the explanation of this curious classification? To say that the relief of the local poor, the education of the local children, and the local protection of life and property are not services which benefit primarily and principally the locality itself seems too paradoxical for words. What really underlies such a strange classification—this may be seen in carefully noting the words used in support of it—is the assumption that local services in this connection are those only *which produce an increase in the rental value of local real estate*. If the local benefit is to the landlord's property, as is plainly the case with regard to sewers and embankments, then it is admitted that the cost may fairly come on the local rates, no matter how much indirect advantage may also accrue to the nation at large. But when the benefits to the locality, however direct and substantial, are of a nature to be enjoyed by the local inhabitants *without paying extra rent for them* (such as education, the provision for the poor, and police protection), those who uphold this classification reveal that the “locality” means to them acres and rent-roll, not inhabitants; describe these services as “onerous”; ignore the benefit to the people of the district, and claim that exactly these services (together, now, with main roads) are the “four” great national services to be wholly charged to the Exchequer!²

It is plain that this argument finds no support in political science. To assert that only those services which increase the rental value of real estate should be paid for out of the local rates is, in effect, to claim that the owners and occupiers of real estate should absolutely cease, *as such*, to contribute out of their existing rentals to the cost of any part of the ordinary local administration. It might conceivably be equitable that these owners and occupiers should not bear the whole expense of local government;

¹ Final (Majority) Report of Royal Commission on Local Taxation (England and Wales), Cd. 638 of 1901, p. 11.

² Majority Report of the Royal Commission on Local Taxation, Cd. 638 of 1901, p. 12.

though, as I have shown, in rural districts this is now less than their estates bore a century ago. But to claim that they ought, in equity to be relieved of the whole expense, except in so far as they graciously give back part of the actual increase effected in their own rent-roll, is, when we remember the history of local taxation and of private landowning in England, an extraordinarily audacious pretention. Yet this is what the argument of the Majority of the Royal Commission on Local Taxation, voicing the desires of the whole "country party," really amounts to.

There is, however, another reason—one which should appeal to the farmers and country gentlemen, as much as to the Municipal Corporations which are often inveigled into using the same language—why this argument of "classification of services" is a dangerous one. If it were really accepted by the Government and the Legislature that certain services were so essentially of national concern that the locality ought not, as such, to be made to bear any part of its cost, the end of local autonomy, as regards those services is surely at hand. Where a service is deemed to be supremely of national importance, no Local Authority can ever be allowed to do as it pleases about it. It is not a little significant that the Continental classification of services is usually into "obligatory" and "optional";¹ and with regard to the "obligatory" services, corresponding with our "onerous" or "national" services, the locality is allowed practically no say, and is bound hand and foot. It is, in fact, only with regard to the "optional" services, corresponding with our "beneficial" or "local" services, that anything approaching to local autonomy is allowed to exist. And this seems to be inevitable. If ever we come, in this country, to a classification of services into "national" and "local," and throw the whole cost of the so-called "national" services on the National Exchequer, any real local government with regard to those services will necessarily cease to be. I know that rural County Councillors sometimes picture to themselves an enlightened Government recognising that they are

¹ *National and Local Finance*, by J. Watson Grice, D.Sc. (Econ.), 1910.

doing that Government a great favour, and saving the nation no small expense, by taking the trouble to administer, without fee or reward, what is really a national service; and they visualise the enlightened Government accordingly, gladly permitting them to administer that service in the locality just as they think fit. But this is a dream, and an ill-informed dream. Though the County Councillors perform a valuable and most useful public service by their gratuitous administration, they thereby save no expense to the Exchequer. The fact has been repeatedly tested. The actual cost of administration of every nationally organised service—whether we take Customs or Excise, the Post Office or the Prisons, the Factory Department or the Labour Exchanges—is demonstrably far lower than it would be if split up into one or two or three hundred local administrations, by local government areas, even with all the advantage of gratuitous local supervision. The recent experiments in dividing the administrative work of Old Age Pensions between the Inland Revenue service and the Local Authorities, and in transferring the collection of various licences and assessed taxes from national to local hands, are on this point finally conclusive. The advantages of local over national administration are, in my view, so great that I want to see local government preserved. But it is not an economical form of administration. If the Government ever came to pay anything like the whole cost of local administration of any service, the Local Authorities would find the little finger of the Government Department of the future thicker than the whole loins of the Local Government Board of to-day. Those representatives of the County Councils and the agricultural interest who plead for any such division of locally administered services, with a view to make the Exchequer bear the whole cost of one class, are unwittingly tending to bring about what I have termed the Bureaucratic System. In the interest of genuine local self-government, which they and I have alike at heart, I adjure them to abandon so suicidal a contention.

Fortunately, however, the advocates of a "classification of services," as the basis of Grants in Aid, do not, in fact,

follow out the logic of their own arguments. They neither propose any rigid exclusion of Grants from all the services which they admit to be "local," nor do they seriously ask the Government to bear the whole cost of those which they contend to be "national." In fact, the particular argument used does not appear in any way to have influenced the practical proposals made. It has, for the most part, merely been picked up, in our characteristic unintellectual way, because it seemed to support proposals that would anyhow have been made without it. But intellectual mistakes of this kind are more dangerous in their subsequent effect on the minds of those concerned, than in their immediate result. They have a way of perverting the mind, and, in after years, of leading us insidiously astray. Let us therefore now bury the fallacy, and proceed on the common assumption that the Grants must be made, not for services arbitrarily styled national, but in aid of certain definitely selected services in which the real objects of Grants in Aid can be most conveniently attained, and in the efficiency of which the community as a whole has a considerable interest.

We see at once that, on this view, that it is of fundamental importance that the Grants should not be fixed sums, but should, year by year, be dependent on local efficiency. It is plainly essential, in the interests alike of economy and efficiency, that the present arrangement of making definitely fixed lump sum Grants, irrespective of the use that is being made of them, should be promptly and completely brought to an end. Such an arrangement operates almost as an encouragement to extravagance and laxity of administration, and makes the National Government a helpless accomplice in the crime.

We may, therefore, confidently expect it to be provided that the Grants in aid of specific services will be administered by the departments of the National Government charged with the supervision of those services, and that, in order to emphasise year by year the conditional character of the Grants, they will be paid by or on the instructions of these departments, direct to the Local Authorities concerned. The conditions on which the Grants are to be

payable should not (as the examples of the English Poor Law Teachers' Grant and the Scottish Medical Grant emphatically warn us) be stereotyped in a statutory enactment, but should be formulated and revised from time to time by the Minister in charge, by a Minute or Code to be laid before Parliament for criticism and possible disapproval. No Grant should be payable unless a certificate is given by the department concerned that the Local Authority is administering the service to be aided in general accordance with the law and with the authoritative regulations of the Department; that the service, alike in adequacy of supply and degree of efficiency—taking into account all the circumstances of the locality—reaches at least what may be considered the national minimum; and that the Local Authority is applying itself to remedy any shortcomings according to its means.

This plan of variable Grants is often objected to on behalf of the Treasury, on the ground that the Chancellor of the Exchequer is thereby rendered powerless over his own Budget. The Grants in Aid, it is said, automatically increase, with the growth in size or efficiency of the aided services, to an extent and at a rate which can neither be controlled nor even predicted. This is a valid objection to such a variable Grant as nearly all those administered by the Board of Education. But because we must concede this point to the Chancellor of the Exchequer, it is mere poverty of imagination, even sheer ignorance of existing alternatives, that leads some advisers to give up all the advantages of variable Grants in Aid, and to adopt (like Lord Goschen) either the plan of assigning specific revenues, or else (as in most of the Poor Law Grants) the plan of giving fixed lump sums. It is, as experience has shown, quite practicable to combine the convenience of a fixed aggregate Grant to the Chancellor of the Exchequer, with the paramount consideration of making the subvention to each Local Authority vary in the desired relation according to the extent or efficiency of the service, or to the changing poverty of the district. What seems pointed to is an arrangement by which the aggregate amount of all the Grants in Aid (or, if preferred, of the Grants in

respect of each of the main services) should be fixed for a term of years (say seven or ten), to be revised only at the expiration of each term, when the total sum would probably, upon a review of all the circumstances, need to be increased for the next ensuing term. The aggregate total so fixed for each of the three kingdoms can then be allotted among the several Local Authorities upon the basis of whatever index of amount or efficiency of service may be adopted. During each term of years the total receivable by all the Local Authorities together would not increase with the growth or efficiency of the service or services, nor decrease with any decline in them. But each particular Local Authority would find the amount of its own share year by year obviously dependent on the size or efficiency of its service, though the percentage that the Grants all bore to the total cost would fall; and each Authority would even have the further inducement that, by developing its service at a greater rate than the average, it would secure in Grant not only a larger amount but also a higher percentage of its expenditure than would be obtained by its more apathetic neighbours. The Lunacy and Medical Relief Grants in Scotland—to a lesser extent, also some of the Irish Grants—have long been allotted in practically this way, with admirable results.¹ Of course, the Local Authorities themselves prefer the Grants to have no fixed aggregate limit, but to increase automatically with the service! They may be left to fight out, with the Chancellor of the Exchequer, *whose* financial convenience shall be paramount. But we ought to take care, in the public interest, that we do not forego the advantages of the variable Grant for the sake of the convenience of either of them or of both.

But although the Grant should, in the interests of efficiency, be a variable one, experience should dissuade us from allocating it on any such mechanical basis as the number of persons treated, or the number of officers engaged, at so much per head or at such a proportion of the salaries paid, at so much per school place or per hospital

¹ Except for the inadvertent stereotyping of the conditions of the Medical Relief Grant in 1889 (see ch. 4).

bed, at any given sum per attendance at school or per week per patient. The simplicity of calculation gained by any such arrangement is outweighed by the impossibility of doing justice to the special circumstances of particular localities, by the difficulty of securing any approach to an equalisation of local burdens, and by the danger of establishing a basis which becomes rapidly obsolete. The provision of a service adequate in extent to the local needs, and yet not unnecessarily expensive, can, as all experience indicates, be better secured by appropriate regulations, compliance with which is enforced by a Grant, than by offering what comes to be a standing bonus on further extensions. Similarly, a rising standard of efficiency, and the introduction of new improvements in service, can be better secured by advisory Circulars and a periodical revision of Regulations to be annually laid before Parliament, coupled with a Grant varying with the total amount of service, than by specific Grants for teachers, nurses, drugs, etc., which can never be made to cover all the various improvements that are being made by one Local Authority or another.

It is to be noted, moreover, that the adoption of the County or County Borough as the unit for administration, which (subject to due consideration of the position of, and possible sharing of services with, the Non-County Boroughs and populous Urban Districts of England, Wales, and Ireland, and the smaller Burghs in Scotland) may now be assumed, will greatly facilitate both the complete remodelling and the future administration of the Grants in Aid.

It follows from all the preceding argument that the Grants should not be made in respect of the whole work of the Local Authorities, but should be applicable to definite and deliberately-selected services.

Grants in aid generally of the expenditure of Local Authorities, without specific allocation to particular services, are (as Mr. Gladstone always declared) wholly injurious encouragements to extravagance. Like the assignment of revenues, they can form no part of scientific finance. All the successful Grants in Aid of the past have

taken the form of proportional subventions towards the cost of specific services. It has only been when a variable and proportional Grant in Aid has been made to the Local Authorities charged with the performance of a specific service which it wished to encourage, as with the Education Grant and the Police Grant in England and Wales, and the Poor Law Medical Grants in Scotland and Ireland, that we see the departments concerned able to frame regulations for making the Grant not merely relieve the ratepayer, but also promote the efficiency of the service.

We do not need to grant special subventions to all the manifold expenditure of Local Authorities. We may leave, for instance, the inhabitants of any locality to clean and light and pave their own streets. We had better let them pay for their own Town Hall. We do not need to assist them to beautify their parks, or to provide a municipal orchestra. We may leave them unaided in all their increasing experiments in "Municipal Trading." There are four main services which, by a consensus of opinion, in the light of past experience, stand out as suitable for Grants in Aid. These are (i.) Education and (ii.) Police, and those parts of the work of the present Poor Law Authorities and Public Health Authorities connected with (iii.) Lunacy, and (iv.) the provision for the sick and infirm, and the maintenance of the Public Health.

The most expensive local service, and the one in which the community as a whole has the greatest interest, is the maintenance of the national minimum of child nurture, which is now the function of the Local Education Authority. The Grants administered by the Board of Education need, not only increasing by something like a million a year (as, in fact, has been promised), but also consolidating and simplifying. The opportunity should, of course, be taken to unite, under the Local Education Authority and the Central Department for Education, all the public provision made for children of school age (not being certified as sick or mentally defective), including, therefore, the enforcement of the Children Act, and all the optional as well as the obligatory functions of the Local Education Authority.

The Police Grant had always, down to 1888, been the most successful of all the Grants in Aid. It was largely spoilt by the Goschen revolution in finance. What is now needed is to go back to the old system of giving a definite proportion of the expenditure year by year, extended to the whole of the local expenditure connected with the administration of justice, under the supervision, as heretofore, of the Home Office (so far as concerns England and Wales).

The existing Lunacy Grants need only extending to the mentally defective of all ages, kinds, and grades, who will, we may assume, in accordance with the recommendations of the Royal Commission on the Care and Control of the Feeble-minded, be provided for exclusively and entirely by the Local Authority for the mentally defective, a re-constituted Asylums Committee of the County or County Borough Council, to which (as in all other cases) the Grant should be paid direct, and not through the conduit-pipe of any other body.

Of the other services at present performed by Local Authorities, that of roads will be largely aided by the new Road Board, which we may expect to see developing into a central supervisory department for road administration, wielding its own extensive funds, whilst agricultural organisation, scientific research, and rural co-operation will receive help from the Development Commission. The present outdoor relief to the aged will henceforth be to a large and, we may believe, an increasing extent borne by the National Exchequer in the form of old age pensions. We may take the Labour Exchanges as a token that the whole dealing with unemployment, together with the provision to be made for the able-bodied, including the vagrants on the one hand and the unemployed on the other, must necessarily be undertaken, in one form or the other, by the National Government, as, indeed so cautious and so experienced a body as the County Councils Association, under such leaders as the Duke of Northumberland and Lord Belper, Lord St. Aldwyn and Mr. Arthur Chapman now proposes, in a scheme which has had the rare fortune to be approved

by both the Majority and the Minority of the Poor Law Commission. It is therefore positively undesirable that any part of the present expenditure of the Local Authorities on workhouses or on outdoor relief should be aided by Government Grants. Another Poor Law service, that of providing for the children of school age, including, when necessary, maintenance as well as schooling, must necessarily become part of the work of the Local Education Authority, which has its own Grant in Aid. Thus, of all the work now done by the Poor Law Authorities, we have left only that obviously destined to be united with that of the Local Health Authority, namely, the provision for the sick and infirm. This, it is clear, should become part of the ordinary work of the unified medical service under the County Medical Officer, which the before-mentioned scheme of the County Councils Association proposes. This work, vital as it is to the community as a whole, receives at present the stimulus and assistance of practically no Grants in Aid—apart from the small subvention towards the salaries of Medical Officers of Health and Sanitary Inspectors—and (we may almost say consequently) no systematic inspection or supervision. It is therefore desirable that a substantial Grant should be received in future by the Local Health Authorities; and that it should become available, under suitable conditions, not for specific items, but for the whole expenditure of these Authorities upon the preservation of the public health and the care of the sick and infirm, including the provision for childbirth and care in infancy up to school age, and the optional as well as the obligatory functions of the Local Health Authority.

The withdrawal, from the Poor Law Authorities of the United Kingdom, of the three and a half millions sterling that they now annually receive (in England and Wales through the conduit-pipe of the County and County Borough Councils) in Grants in Aid—Grants, as we have seen, of a specially defective character—would be politically impossible if we were not, at the same time, actually relieving the Boards of Guardians and Parish Councils of an equivalent burden. These very Authorities are just

being relieved, to the extent of a million and a half a year, of the outdoor relief that they have hitherto been actually disbursing to people over 70. The transfer of the thousands of actually certified imbeciles from the workhouses to the asylums of the Local Lunacy Authority, —which would save, in food alone, close upon two hundred thousand pounds a year—needs but a stroke of the pen of the President of the Local Government Board, in his signature of an Order amending the General Consolidation Order of 1847, by definitely forbidding, after an early date, the retention of any such person in any workhouse. At the same time, it would, of course, be provided, in the Act realloiting the Grants in Aid, that the Poor Law Authorities would no longer be required to make any payments to the Local Lunacy Authorities for pauper lunatics in the County Asylums—thus saving the Poor Law Authorities over a million and a half per annum—or to the Local Health Authorities for the constantly-increasing number of pauper patients sent to the Municipal Hospitals. With all this alleviation of the burden on the Poor Law Authorities, at once saving them, in actual outgoings, at least as much as they now receive from the Exchequer, and the relief being even a progressively increasingly one, the present Grants to these Authorities—which, as we have seen in a preceding chapter, have every possible defect that a Grant in Aid can have, and practically no merits—would naturally be at once terminated; even if any complete scheme of dealing with the Poor Law has to be deferred. The Poor Law Authorities would, of course, start by fearing that the Poor Rate that they have to levy would be increased, but they would presently find that, relieved of their aged out relief cases over 70, of the certified imbeciles in the workhouses, and of all their out-of-pocket payments for lunatics and sick, they would, in fact, in the aggregate, be financially better off, even without their Grants in Aid, than they are at present. Any exceptional cases, in which the Poor Rate could be shown to have been increased by reason of the change, as compared with that for 1910 (prior to the removal of the pauper disqualification for Old

Age Pensions), might be met by a special and temporary Grant to the particular Poor Law area.

It remains to be considered on what basis the Grants in Aid to the several Local Authorities concerned, namely, the Local Education Authorities, the Local Police Authorities, the Local Lunacy Authorities, and the Local Health Authorities, who are, in the principal towns of England and Wales, all united in the County Borough Council.

It may be suggested that the Grant in Aid of the Local Lunacy Authorities may well continue to be made on the simple basis of so many shillings per week for every certified person for whom approved asylum provision is made. Certain amendments are desirable, viz., (1) the Grant should be uniform for all classes of mentally defective persons under the Local Lunacy Authority, and identical with whatever Grant may be given in respect of other inmates of institutions, so as to avoid all financial bias in the classification of patients; (2) it should be payable irrespective of what may be recovered from the patients' relatives, so as not to deprive the Local Authority (as is stupidly done at present) of all inducement to effect such recovery; and (3) it should be so fixed as to encourage those Local Lunacy Authorities which might improve the character of their provision. These considerations point, it may be suggested, to the aggregate Lunacy Grant for England and Wales (with corresponding equivalents for Scotland and Ireland) being fixed, at the outset, for the first term of seven years, at approximately half the aggregate cost to the Local Lunacy Authorities, irrespective of recoupments from relatives of patients, etc. The total so fixed should then be allocated, year by year, among the Local Authorities, subject to a proper certificate of efficiency, in proportion to the number of patients whom they were year by year providing for.

The basis of the Police Grant might advantageously remain as at present, again with a fixed aggregate total for a term of seven years, calculated, at half the present aggregate expenditure on this service (with which might be included the expenses of criminal prosecutions, etc.)

of the Local Authorities aided. The sum thus allotted would then be divisible, year by year, among all such Authorities, in proportion to their total expenditure on the service.

With regard to the multifarious Grants to the Local Education Authorities, amounting in the aggregate to twenty millions a year, it is clear that there must be much greater simplification and much more effective equalisation of local burdens. Yet it is probably undesirable to forego the lever for educational improvements afforded by special Grants towards such optional local expenditure, in excess of the "National Minimum," as (a) support of University Colleges, Technical Institutions, Training Colleges, and Secondary Schools; (b) an effective "Scholarship Ladder"; (c) provision for boys and girls between 14 and 18; and (d) special schools for the blind, deaf and dumb, the physically defective, and those dull-witted children who cannot be certified for relegation to the Lunacy Authority. Special Grants in Aid of these forms of expenditure, which it might otherwise be difficult universally to insist on, had better continue to be made (and must plainly be promptly increased in amount) on the best basis that experience may dictate. But all the rest of the educational requirements, including cookery and manual training classes, might surely now be insisted on (together with the medical inspection and treatment, and adequate execution of the duties with regard to neglected and necessitous children of school age) as part of the general conditions as to local efficiency without which no Grant would be payable. Subject to such stipulations and general conditions, as hereafter explained, it seems desirable to sweep away all the complications of "average attendance" and the rest of it; and to make the Grants simply in lump sums to the several Local Education Authorities, in proportion to their total expenditure on the service, and, in the manner to be subsequently described, in proportion to their poverty.

We come now to the fourth main service, that of the Local Health Authorities, which cannot fail increasingly to include, with a unified medical staff, and a combined

provision of hospitals and infirmaries, the whole of the public provision to be made for the sick poor, in substitution for the General Mixed Workhouse and the "deterrent" medical service of the Poor Law, apart from whatever may be effected by the Government scheme of Sickness Insurance. But the proposals immediately necessary for a complete revision of the Grants in Aid do not involve any such simultaneous supersession of the Poor Law. What is proposed that (in lieu of the Grants to the Poor Law Authorities, now rendered unnecessary by their being relieved of between three and four millions of expenditure) there should be paid to the Local Health Authorities, under appropriate conditions, a substantial Grant of fixed aggregate total in aid of all their work under the Public Health Acts; including equally (*a*) their improvements of the material environment in the way of drainage, paving, housing, water supply, etc; (*b*) their provision for the prevention of disease, by notification, health visiting, house to house inspection, and their "searching out" of cases of untreated sickness so as to deal with it at the incipient stage; and (*c*) their rapidly-growing provision of medical treatment, in their own municipal hospitals, sanatoria, dispensaries, etc., not only of smallpox and scarlet fever, but also of phthisis, measles, whooping-cough, and by "milk clinics" and "Schools for Mothers," of infantile disorders generally. What is suggested is that, here also, the sum to be fixed for the first term of seven years, as the aggregate total of these Grants in Aid, should be, for England and Wales (with equivalents for Scotland and Ireland) approximately one-half of the total sum now being spent by the Local Health Authorities on all their manifold work under the Public Health Acts.

It will be seen, therefore, that alike for Lunacy and Police, Education and Health, it is suggested that the contribution of the Exchequer should be one-half of the present cost of the service. This proportion has the advantage of fitting in approximately with the existing facts. But it has also the high authority on its side of Lord Balfour of Burleigh, who made, in his Separate

Report from the Royal Commission on Local Taxation, the same proposal.¹ More than half it appears both unnecessary and undesirable for the Exchequer to contribute, in order to leave a desirable inducement to local economy. Less than half it is equally undesirable to grant, because (as Lord Balfour of Burleigh also pointed out) it is "essential that the Grants should nowhere be reduced to such an extent as to weaken the control already exercised."²

It is perilous, amid all the complications of the figures, in the wilderness of blue books—none of them giving exactly comparable figures for the different parts of the United Kingdom, and few of them deigning to include in a simple statement all the various kinds of subventions from the Exchequer—to propose any definite sums. But, by way of illustration, without necessarily asserting that the amounts are exactly correct, we may take the present total expenditure of the Local Authorities of England and Wales on police, conveyance of prisoners, and criminal prosecutions at approximately £5,000,000 per annum; on lunacy (allowing for the early transfer of all certified persons from the General Mixed Workhouse) at £3,000,000 per annum; on education (exclusive of University and secondary education, scholarships, continuation schools and special schools for the blind, etc., for which separate Grants must continue to be made) at £24,000,000 per annum; and on the Public Health service (including the transfers suggested) at (a mere guess) £10,000,000 per annum—making a total gross expenditure (apart from loans) of £42,000,000 per annum. The aggregate Government Grant for these services would, on this proposal, amount for the first term of seven years, to £21,000,000 for England and Wales. To this must be added (i.) the separate Grants that would continue to be payable by the Board of Education, at present amounting, perhaps, to £2,000,000—a sum which ought to be increased to £3,000,000; (ii.) the Grant for Industrial and Reformatory Schools which

¹ Final Report of Local Taxation Commission (England and Wales), Cd. 638 of 1901, p. 73.

² Final Report of Local Taxation Commission (Scotland), 1902, p. 32.

would continue to be payable as at present, £200,000; (iii.) the miscellaneous subventions, such as Distress Committee Grants, etc., £250,000; and (iv.) equivalent totals under all heads for Scotland and Ireland, say £7,000,000 a year. This gives us an aggregate total of between £31,000,000 and £32,000,000, which may perhaps represent on the present total, an increase of £2,000,000 a year, with which to ensure that no Local Authority shall—at the very worst—receive less than at present. The Chancellor of the Exchequer, it may be suggested, would do well if he could compound for some such sum, all but a small proportion of it being insusceptible of increase for a period of seven years.

It remains to be suggested how that or any other total sum—so far as the fixed aggregate is concerned—can be best allotted among the several Local Authorities in such a way as to (i.) maintain their interest in economical administration; (ii.) secure the enforcement everywhere of a “National Minimum” of efficiency in each service; (iii.) stimulate and encourage improvements and a rise in the standard of efficiency; and (iv.) so far equalise the burden on the ratepayer as to prevent even the poorest district being made to pay more than the average rate in the pound of the Kingdom as a whole. Here, again, we have the high authority of Lord Balfour of Burleigh for the suggestion and the outline of a plan of distribution which would continue subventions in proportions to cost of the local service, with such an adjustment as would give to the poorer districts more than the richer districts.¹ It is of great importance (as all our experience has proved) to afford some special encouragement to poor districts, and to make the Grant in Aid for each service to each Local Authority vary, not only in proportion to the expenditure of that Authority on the service, but also in proportion to its poverty, as measured by the assessable value of its area per head of population. Probably every competent authority would agree on this point with the Royal Commission on the Care and Control of the Feeble-minded,

¹ Final Report of Local Taxation Commission (Scotland), 1902, p. 32.

though with a wider application of their words. "As matters now stand," they say, "it is, we think, impossible for counties with a low assessable value, and many claims on the County Rate, to make a provision that, in our opinion, is absolutely necessary in the interests of the community . . . and the mere fact that the subsidy of the Exchequer is increased, even largely increased, will not, of itself, meet the difficulty. On the other hand, by the application of definite standards to administrative finance, the methods which we recommend would further economy." In fact, "so long as the burden of the necessary expenditure upon national services falls with greater severity upon one district than another, it is difficult to insist upon general administrative reforms." That Commission accordingly recommended for adoption, with regard to the Grant for all the mentally defective, the plan submitted to the Royal Commission on Local Taxation by such high authorities as Lord Balfour of Burleigh, Sir George Murray, and the late Sir Edward Hamilton. This plan, which is here extended and elaborated, proceeds on the basis of fixing what we may call a "National Minimum" rate of expenditure per head of population—taking something like the minimum which experience shows to be anywhere necessary for efficiency—and a standard rate in the pound—taking, it may be suggested, something like the average of the rates of the country as a whole. If the product of the standard rate does not produce, in the area of any Local Authority, the amount of the "National Minimum" of expenditure for its population, the deficiency might be made wholly good by what has been called the Primary Grant. The actual expenditure of the Local Authority would, however, practically always be in excess of the national minimum rate of expenditure per head of population—this necessarily having to be at the lowest customary standard—and towards the excess the National Government should contribute, as the Secondary Grant, a moderate proportion only—an amount which might be whatever can be afforded from the balance of the fixed total aggregate Grant (after deducting the sum of all the Primary Grants), in exact proportion to the

actual expenditures of the several Local Authorities over and above the standard expenditure per head of population. The amounts of the Primary and Secondary Grants to each Local Authority would be added together, and paid over as a single block Grant.

This scheme of distribution has been put into precise Parliamentary terms, so far as the proposed Grant to the Local Health Authority is concerned, in the following clause.¹

“ In lieu of the Grants now paid by Parliament to Boards of Guardians there shall be paid annually out of moneys provided by Parliament to a special account, to be termed the Exchequer Contribution (Health Grants) Account, a sum which during each of the seven years next ensuing shall not exceed *four million pounds sterling*, and which shall, during each subsequent period of seven years, not exceed such sum as may from time to time be voted by Parliament.

There shall be paid annually from the Exchequer Contributions (Health Grants) Account, under regulations to be made by the Local Government Board with the approval of the Treasury, to the Council of every County and County Borough in aid of their expenditure under the Acts mentioned in the Third and Fourth Schedules to this Act and under Section 5 of this Act such sums as may each year be fixed by the Local Government Board in accordance with the following principles:—

- (a) There shall be determined for each year by the Local Government Board a rate of expenditure per head of population (to be termed the National Minimum of Health Expenditure), which in the opinion of the Local Government Board will amount to the least sum at which under the most favourable circumstances the Council of any County or County Borough can possibly discharge efficiently the duties laid upon them by Parliament, under the Acts mentioned in the Third and

¹ Extracted from *The Prevention of Destitution Bill, 1910* (National Committee for the Prevention of Destitution, 37, Norfolk Street, London, price 1s.).

Fourth Schedules to this Act, and Section 5 of this Act and any Acts amending any of these Acts.

- (b) There shall be determined for each year by the Local Government Board, a rate in the pound assessable value (to be termed the Standard Average Health Rate), which, in the opinion of the Local Government Board, represents as nearly as can be ascertained the average rate in the pound required in the last preceding year to defray the aggregate expenditure of the Councils of all the Counties and County Boroughs in the discharge of their duties as aforesaid.
- (c) No Grant shall be payable under this section to the Council of any County or County Borough which have not, in the opinion of the Local Government Board, expended in the discharge of their duties as aforesaid during the last preceding year a sum equal to the National Minimum of Health Expenditure determined as aforesaid.
- (d) If, in the opinion of the Local Government Board, the amount of expenditure incurred by the Council of any County or County Borough during the last preceding year in the discharge of their duties as aforesaid could not be met after deducting all receipts in aid by a rate in the pound equal to the Standard Average Health Rate determined as aforesaid, there shall be paid to the Council of such County or County Borough out of the Exchequer Contributions (Health Grants) Account a sum, to be termed the Primary Health Grant, equal to the deficiency thus ascertained.
- (e) There shall be paid out of the Exchequer Contributions (Health Grants) Account to the Council of every County and County Borough other than those referred to in Section 5, sub-section 4 (d) of this Act, such a Grant in Aid of their expenditure under the Acts mentioned in the Third and Fourth Schedules annexed hereto and Section 5 of this

Act, and any Acts amending any of these Acts (to be termed the Secondary Health Grant) as may be determined by the Local Government Board, the amount of the Grant in each case being made equal to such uniform proportion of the actual expenditure of the several Councils under the said Acts and under Section 5 of this Act as can be met from the Exchequer Contributions (Health Grants) Account for the year then current after the whole of the Primary Grants as aforesaid have been paid. Provided that in computing for the purpose of any Grants under this Section the actual expenditure as aforesaid of the Council of any County or County Borough the Local Government Board shall, without necessarily disallowing it as illegal, exclude any expenditure which in its judgment was so excessive or extravagant or ill-advised as not to warrant a contribution from the Exchequer towards such expenditure.

- (f) No Grant shall be paid under this section until a certificate has been issued by the Local Government declaring that the provisions of the Acts mentioned in the Third and Fourth Schedules to this Act and of Section 5 of this Act and of any Acts amending any of these Acts, have in the last preceding year either been carried out in all parts of the County or County Borough with reasonable efficiency, or that the Council are taking steps in a manner which the Local Government Board considers satisfactory to remedy such deficiencies as exist. If the Local Government Board is not satisfied as aforesaid, it may at its discretion deduct such amount as it thinks fit from the amount of the Grant that would otherwise be payable, and give a certificate declaring the ground of its dissatisfaction and the amount of such deduction, and in that case the amount of the Grant as so reduced shall alone be payable to the Local Authority in question."

A similar basis and procedure could, with advantage, be

adopted with regard to the Elementary Education Grants. If the principal Grants in Aid to the Local Authorities—those for Education and Health, and perhaps also that for Police—were made somewhat on this basis—the exact figures being worked out according to the circumstances of England and Wales, Scotland, and Ireland respectively—the poorest and the most backward localities would—provided that they brought their administration up to a reasonable standard of efficiency—receive larger Grants in proportion to their assessable value, as well as a larger proportion of their expenditure, than the richer and more progressive districts. It is only too plain that, as Lord Balfour of Burleigh pointed out, that “so long as the poorest districts are not treated with greater liberality than the richer ones, it will be almost impossible to secure reforms in administration, which would entail an additional burden upon the rates without constant appeals to the central Government for assistance, such appeals mainly coming from the poorer districts, in which the burden is already very high. If the rich and poor districts were once placed, so far as possible, upon the same footing . . . these demands upon the State would be less frequent and persistent, and . . . administrative reforms would be more easily effected.” It is, in fact, practically impossible to press upon a Local Authority the adoption of a higher standard of efficiency of service—essential as it may be in the interests of the community—if the improvement would, owing to the poverty of the district, involve a rate actually higher than that of the average of the country as a whole. It appears a most valuable feature of the plan of distribution advocated by Lord Balfour of Burleigh that it ensures, even to the poorest district of the United Kingdom, the ability to attain at any rate the “National Minimum” of efficiency in its local services, at no greater rate in the £ than that which is the average for the country as a whole. On the other hand, even the richest and most progressive Local Authorities, on whose continued experimenting in improved methods of treatment all further advance in efficiency of local administration will depend in the future, as it has depended in the past, will, whilst

retaining full autonomy to make whatever experiments they choose, receive Grants which will, subject to the sanction of the departments concerned, vary with the amount of their expenditure on the services in which the community as a whole has so vital an interest.

It would, of course, be essential that the accounts of all Local Authorities receiving Grants in Aid should be duly audited by district auditors, who should, in Scotland, as is already the case in England, Wales, and Ireland, be officers specially appointed for the purpose, and giving their whole time to the work. The Minority Report of the Poor Law Commission usefully drew attention to the importance of definite qualifications (as to age, experience, and competency in financial and administrative knowledge) being required from candidates for this important appointment, and to the desirability of the auditor's report (*though not his disallowances*) extending to more than the question of the bare legality of the expenditure.

No Grant should be payable unless a certificate is given by the Department concerned that the Local Authority is administering the service to be aided in general accordance with the law and with the authoritative regulations of the Department; that the service, alike in adequacy of supply and degree of efficiency—taking into account all the circumstances of the locality—reaches at least what may be considered the "National Minimum"; and that the Local Authority is applying itself to remedy any shortcomings according to its means. It ought, of course, to be an invariable rule that immediately the Department has reason to anticipate, owing to a report from its Inspector or otherwise, that it may not be in a position at the proper time to give this certificate, it should send instant warning to the Local Authority concerned. Finally, where the certificate cannot be given, the Department concerned should be empowered to withhold, after due warning, either the whole Grant or any portion of it, and, if thought necessary, in order that the inhabitants should have their attention specially called to the maker, perhaps to require that the deficiency should be made good by the levy of a special additional rate, before any future Grants will be paid.

Then there is the question of valuation. At present there is considerable difference of level between the local assessments on which the rates are levied. In one parish everyone is assessed up to the hilt at a rack rental. In another, everyone is put down at only half or two-thirds the rack rental. No system of equalisation of rates can be properly worked without arrangements for equalising valuations to a common standard for the whole kingdom. This is a reform long overdue. Pending its accomplishment use might be made of the total assessments for each County and County Borough for Schedule A of the Income Tax. Here we have the local valuation lists "levelled up" by the officers of the Inland Revenue to something approximating to a uniform basis. From these totals (which are already public) it would be possible for the Local Government Board, with various minor adjustments presenting no difficulty, to determine a reasonably equitable "County Basis" on which to calculate the Grants.

Finally, there is the question of a quinquennial Census. No proper comparison of the needs and financial ability of different localities can be made without a reasonably correct numbering of the people; and our present Census interval of ten years is, by common consent, too long for accuracy. It is vital that any re-arrangement of Grants in Aid should include both a standardised valuation and a quinquennial numbering of the people in each locality. But neither of these offers any insuperable difficulties. All that has been lacking is the desire to put the matter right. From the present Chancellor of the Exchequer we may perhaps hope for better things.

BIBLIOGRAPHY

For the following extensive list of references to Grants in Aid, especially in their bearing on administration, I am indebted, almost entirely, to Dr. Watson Grice, whose book, *National and Local Finance*, deals with their history more completely than any other work; and to Mr. B. M. Headicar, Librarian at the London School of Economics and Political Science.

THE PREVENTION OF DESTITUTION

Demy 8vo. (1911). 300 pp. Price 6s. net.

IN this volume the authors propound a constructive policy, by the adoption of which they believe that the nation could, within a very few years, get rid of the great bulk of involuntary destitution. The extensive ravages of preventible sickness are shown to be productive, directly and indirectly, of probably half the whole mass of destitution ; and the authors give us the outlines of a national campaign against sickness. The evil effects of child neglect, from infancy to adolescence, are traced in their resulting adult destitution ; and the authors describe the methods of securing what may be called a "National Minimum" of child nurture. The dependence of destitution on feeble-mindedness and mental deficiency leads to an examination of the bearing, upon the problem, of the doctrines of Eugenics. The effects of "Sweating" and Unemployment in producing destitution are specially dealt with ; and a full exposition is given of the striking plan for actually preventing the great bulk of unemployment, and for maintaining under training those whose unemployment cannot be prevented, with which the authors' names are associated. The experiments and proposals in Insurance, whether voluntary or compulsory, against sickness or against unemployment, receive elaborate analysis and criticism ; and the experience both of the Friendly Societies and of the German Government is invoked to indicate in what way Insurance may safely be made use of as part of the provision for Old Age, Invalidity, Industrial Accidents, Sickness, and Involuntary Unemployment. Finally, an elaborate chapter is devoted to "the Moral Factor," and a full examination is made of the direct and indirect effects on personal character and on family life, both of the present system of dealing with those who are in need, and of the proposed campaign of prevention.

ENGLISH LOCAL GOVERNMENT

(THE PARISH AND THE COUNTY)

FROM THE REVOLUTION TO THE MUNICIPAL
CORPORATIONS ACT

Demy 8vo, xxvi and 664 pp. (1907). Price 16/- net

THIS work, the result of eight years' research into the manuscript records of the Parish and the County all over England and Wales—from Northumberland to Cornwall, from Cardigan to Kent—combines history and description in a continuous narrative of extraordinary interest. Avoiding the questions of the origin of English local institutions, and even of their mediæval development, the authors plunge at once into a vivid description of the Parish Officers and the Vestry, Quarter Sessions and the Justices of the Peace, the Lord-Lieutenant and the High Sheriff, together with all the other authorities by which the internal administration was actually carried on. An entirely new view is presented of the social and political development of Parish Vestry and Quarter Sessions, of their relations to the Squire and the Incumbent, and of their attitude towards Parliament and the problems of their age. But the book is more than a contribution to history and political science. Practically all the counties of England and Wales, and literally hundreds of parishes, find place in this unique record of life and manners, in which are embedded not a few dramatic episodes of absorbing interest. It is a new picture of English life between 1689 and 1835 as it actually was in country and town, with graphic tracings of its results on national progress and on the social and economic problems by which we are now confronted.

ENGLISH LOCAL GOVERNMENT

(THE MANOR AND THE BOROUGH)

FROM THE REVOLUTION TO THE MUNICIPAL
CORPORATIONS ACT

Demy 8vo, viii and 858 pp., in 2 volumes (1908). Price 25/- net.

IN this second instalment of their English Local Government the authors apply their method of combined history and analysis to the fascinating story of the towns and the manorial communities of England and Wales. An interesting new account is given, from unpublished materials, of the organisation and development in the seventeenth and eighteenth centuries of the Manor and its several Courts, with picturesque glimpses of the hitherto undescribed part played by the Jury in the common-field agriculture. But the Manor is shown to be also the starting-point for a whole series of constitutional developments, passing through grade after grade of Manorial Borough, hitherto undescribed, into the complete Municipal Corporation. Their extensive study of the manuscript records enables the authors to set forth the inner working of the "Municipal Democracies" that existed alongside the chartered oligarchies, with their many analogies to modern American cities; and to bring vividly to notice the conditions and limitations of successful Democratic government. There is an interesting sketch of English hierarchies of town government, chief among them being the Cinque Ports, the constitutional position of which is presented in a new light. The anomalous history of the City of Westminster is explored by the light of the unpublished archives of its peculiar municipal organisation. An altogether novel view is presented of the constitutional development of the greatest municipality of all, the Corporation of the City of London, to which no fewer than 124 pages are devoted. The work concludes with a picturesque account of the "Municipal Revolution" of 1835, and the Homeric combat of Brougham and Lyndhurst which ended in the Municipal Reform Act of 1835.

THE BREAK-UP OF THE POOR LAW

BEING PART I. OF THE MINORITY REPORT OF
THE POOR LAW COMMISSION

EDITED, WITH INTRODUCTION, BY SIDNEY AND BEATRICE WEBB

*Demy 8vo, xx and 604 pp. 7/6 net. Uniform with
"English Local Government"*

BLUEBOOKS, it has been said, are places of burial. The Report of the Royal Commission on the Poor Law and the Agencies dealing with the Unemployed is a ponderous tome of seven pounds weight, crowded with references, footnotes, and appendices, impossible either to handle or to read. Mr. and Mrs. Webb have, therefore, rescued from this tomb the Minority Report signed by the Dean of Norwich, Messrs. Chandler and Lansbury, and Mrs. Webb herself. By omitting all the notes and references, and printing the text in clear type on a convenient octavo page, they present the reader with something which he can hold with comfort by his fireside.

This Minority Report is a new departure in such documents. It is readable and interesting. It is complete in itself. It presents, in ordered sequence, page by page, a masterly survey of what is actually going on in our workhouses and in the homes of those maintained on Outdoor Relief. It describes in precise detail from carefully authenticated evidence what is happening to the infants, to the children of school age, to the sick, to the mentally defective, to the widows with children struggling on their pittances of Outdoor Relief, to the aged and infirm inside the workhouse and outside. It sets forth the overlapping of the Poor Law with the newer work of the Education and Public Health Authorities, and the consequent waste and confusion. It gives a graphic vision of the working of the whole Poor Law machinery in all parts of the United Kingdom, which is costing us nearly twenty millions sterling per annum.

The volume concludes with a Scheme of Reform, of novel and far-reaching character, which is elaborately worked out in detail, involving the abolition of the workhouse, the complete disappearance of the Poor Law, and the transfer of the care of the children, the sick, the mentally defective, and the aged to the several committees of the County Borough Councils and County Councils already administering analogous services.

THE PUBLIC ORGANIZATION OF THE LABOUR MARKET

BEING PART II. OF THE MINORITY REPORT OF
THE POOR LAW COMMISSION

EDITED, WITH INTRODUCTION, BY SIDNEY AND BEATRICE WEBB

*Demy 8vo, xvi and 332 pp. 5/- net. Uniform with
"English Local Government"*

THE Problem of the Unemployed, which the Royal Commission on the Poor Law was incidentally set to solve, is the question of the day. Part II. of the Minority Report deals with it in a manner at once comprehensive and complete. The whole of the experience of the Poor Law Authorities, and their bankruptcy as regards the destitute able-bodied, is surveyed in vivid and picturesque detail. There is a brief account of the work of Voluntary Agencies. A lucid description is then given, with much new information, of the movement started by Mr. Chamberlain in 1886, which culminated in the Unemployed Workmen Act of 1905. The story is told of the various experiments and devices that have been tried during the past twenty years, the Relief Works and the Farm Colonies, etc. This leads up to an altogether novel descriptive analysis of the Unemployed of to-day, who they actually are, and what they really need. The final chapter on Proposals for Reform gives, in elaborate detail, the Minority's plan for solving the whole problem of Unemployment—not by any vague and chimerical panacea, but by a series of administratively practicable reforms, based on the actual experience of this and other countries, which are within the compass of the Cabinet, and could, if desired, be carried in a single session of Parliament.

ENGLISH POOR LAW POLICY

Demy 8vo, xiii and 379 pp. (1910). Price 7/6 net

IN this volume the authors of *Industrial Democracy* and *English Local Government* present what is practically a history of the English Poor Law, from the Report of the Royal Commission of 1832-4 down to that of the Royal Commission of 1905-9. For this work they have analysed, not only the statutes, but also the bewildering array of General and Special Orders, Circulars, Minutes, Inspectors' exhortations, and unpublished letters, by means of which the Poor Law Commissioners, the Poor Law Board, and the Local Government Board have sought to direct the policy of the Boards of Guardians. No such history has before been attempted. For the first time the gradual development of policy can be traced, with regard to children, to the sick, to the aged and infirm, to vagrants, to the able-bodied, etc. The reader is enabled to watch the gradual and almost unconscious evolution, from out of the "principles of 1834," of what may be called the "principles of 1907"; being the lines of policy to which the experience of three-quarters of a century had brought the administrator when the recent Royal Commission overhauled the subject. Two concluding chapters summarise and analyse the proposals of the Majority and the Minority Reports.

THE STATE AND THE DOCTOR

Demy 8vo, xiii and 276 pp. (1910)

Price 6/- net.

WE do a great deal of State Doctoring in England—more than is commonly realised—and our arrangements have got into a tangle, which urgently needs straightening out. Everywhere there is a duplication of authorities and more or less overlapping of work. We are spending out of the rates and taxes, in one way or another, directly on sickness and Public Health, a vast sum of money annually—no man knows how much, but it certainly amounts to six or seven millions sterling.

There is no popular description of our existing State Doctoring. Many worthy people, thinking themselves educated, don't even know of its existence. This sketch of what is actually going on at our expense, and this analysis of the various proposals for reform, will serve to place the reader in a position to make up his mind as to what ought to be done.

THE HISTORY OF TRADE UNIONISM

*Demy 8vo ; Tenth Thousand ; New Edition, with
New Introductory Chapter (1911) ; lvii and 558 pp.*

Price 7/6 net.

THIS work describes, not only the growth and development of the Trade Union Movement in the United Kingdom from 1700 down to the present day, but also the structure and working of the present Trade Union organisation in the United Kingdom. Founded almost entirely on material hitherto unpublished, it is not a mere chronicle of Trade Union organisation or record of strikes, but gives, in effect, the political history of the English working class during the last one hundred and fifty years. The opening chapter describes the handicraftsman in the toils of the industrial revolution, striving vainly to retain the mediæval regulation of his Standard of Life. In subsequent chapters the Place Manuscripts and the archives of the Privy Council and the Home Office enable the authors to picture the struggles of the early Trade Unionists against the Combination Laws, and the remarkable Parliamentary manipulation which led to their repeal. The private records of the various Societies, together with contemporary pamphlets and working-class newspapers, furnish a graphic account of the hitherto undescribed outburst of "New Unionism" of 1830-34, with its revolutionary aims and subsequent Chartist entanglements. The hidden influence of Trade Unionism on English politics is traced from point to point, new light being incidentally thrown upon the defeat of Mr. Gladstone's Government in 1874. A detailed analysis is given of the economic and political causes which have, since 1880, tended to divorce the Trade Union Movement from its alliance with "official Liberalism." A new introductory chapter brings the story down to the last few years. The final chapter describes the Trade Union world of to-day in all its varied features, including a realistic sketch of actual Trade Union Life by a Trade Union Secretary.

INDUSTRIAL DEMOCRACY

Demy 8vo ; Tenth Thousand ; New Edition in 1 vol., with New Introductory Chapter (1902) ; lxi and 929 pp., with Two Diagrams

Price 12/- net.

IN this work the authors of *The History of Trade Unionism* describe, with the systematic detail of the scientific observer, and in the same objective spirit, all the forms of Trade Unionism, Factory Legislation, and other regulation of industry to be found within the British Isles. The employer in difficulties with his workmen, the Trade Unionist confronted with a new assault upon his Standard Rate, the politician troubled about a new project for Factory Legislation, the public-spirited citizen concerned as to the real issues of a labour dispute, will find elucidated in this work the very problems about which they are thinking. It is a storehouse of authenticated facts about every branch of "the Labour Question," gathered from six years' personal investigation into every industry in all parts of the Kingdom; systematically classified; and made accessible by an unusually elaborate Index. But the book is more than an Encyclopedia on the Labour Question. The century-long experience of these working-class organisations affords unique evidence as to the actual working of such expedients as the Referendum, the Initiative, Government by Mass Meetings, Annual Elections, Proportional Representation, Payment of Members, and, generally, the relation between the citizen-elect, the chosen representative, and the executive officer. Those who regard the participation of a working-class electorate in the affairs of government as the distinctive, if not the dangerous feature in modern politics, will here find the phenomenon isolated, and may learn how the British workman actually deals with similar issues in his own sphere. The intricate constitutions and interesting political experiments of the thousand self-governing Trade Union republics are dissected and criticised by the authors in such a way as to make the work a contribution to Political Science, as to the scope and method of which the authors, in describing their investigations, propound a new view.

A new Introductory Chapter deals at length with Compulsory Courts of Arbitration and Wage-Boards in New Zealand and Australia.

STUDIES IN ECONOMICS and POLITICAL SCIENCE.

A Series of Monographs by Lecturers and Students connected with
the London School of Economics and Political Science.

EDITED BY THE
DIRECTOR OF THE LONDON SCHOOL OF
ECONOMICS AND POLITICAL SCIENCE.

1. THE HISTORY OF LOCAL RATES IN ENGLAND.

The substance of five lectures given at the School in
November and December, 1896. By EDWIN CANNAN,
M.A., LL.D. 1896 ; 140 pp., Cr. 8vo, cloth, 2s. 6d.
P. S. King & Son.

2. SELECT DOCUMENTS ILLUSTRATING THE HISTORY OF TRADE UNIONISM.

I.—THE TAILORING TRADE. By F. W. GALTON.
With a Preface by SIDNEY WEBB, LL.B. 1896 ; 242
pp., Cr. 8vo, cloth, 5s. *P. S. King & Son.*

3. GERMAN SOCIAL DEMOCRACY.

Six lectures delivered at the School in February and
March, 1896. By the Hon. BERTRAND RUSSELL, B.A.,
late Fellow of Trinity College, Cambridge. With an
Appendix on Social Democracy and the Woman Question
in Germany. By ALYS RUSSELL, B.A. 1896 ; 204 pp.,
Cr. 8vo, cloth, 3s. 6d. *P. S. King & Son.*

4. THE REFERENDUM IN SWITZERLAND.

By M. SIMON DEPLOIGE, University of Louvain. With a letter on the Referendum in Belgium by M. J. VAN DEN HEUVEL, Professor of International Law in the University of Louvain. Translated by C. P. TREVELYAN, M.A., Trinity College, Cambridge, and edited with Notes, Introduction, Bibliography, and Appendices, by LILIAN TOMN (Mrs. Knowles), of Girton College, Cambridge, Research Student at the School. 1898; x. and 334 pp., Cr. 8vo, cloth. 7s. 6d.
P. S. King & Son.

5. THE ECONOMIC POLICY OF COLBERT.

By A. J. SARGENT, M.A., Senior Hulme Exhibitioner, Brasenose College, Oxford; and Whately Prizeman, 1897, Trinity College, Dublin. 1899; viii. and 138 pp., Cr. 8vo, cloth. 2s. 6d.
P. S. King & Son.

6. LOCAL VARIATIONS IN WAGES.

(The Adam Smith Prize, Cambridge University, 1898.) By F. W. LAWRENCE, M.A., Fellow of Trinity College, Cambridge. 1899; viii. and 90 pp., with Index and 18 Maps and Diagrams. Quarto, 11 in. by 8½ in., cloth. 8s. 6d.
Longmans, Green & Co.

7. THE RECEIPT ROLL OF THE EXCHEQUER FOR MICHAELMAS TERM OF THE THIRTY-FIRST YEAR OF HENRY II. (1185).

A unique fragment transcribed and edited by the Class in Palæography and Diplomatic, under the supervision of the Lecturer, HUBERT HALL, F.S.A., of H.M. Public Record Office. With thirty-one Facsimile Plates in Collotype and Parallel readings from the contemporary Pipe Roll. 1899; vii. and 37 pp.; Folio, 15½ in. by 11½ in., in green cloth; 5 copies left. Apply to the Director of the London School of Economics.

8. ELEMENTS OF STATISTICS.

By ARTHUR L. BOWLEY, M.A., F.S.S., Cobden and Adam Smith Prizeman, Cambridge; Guy Silver Medallist of the Royal Statistical Society; Newmarch Lecturer, 1897-98. 500 pp., Demy 8vo, cloth, 40 diagrams. 1901; *Third Edition*, 1907; viii. and 336 pp. 10s. 6d. net.
P. S. King & Son.

9. THE PLACE OF COMPENSATION IN
TEMPERANCE REFORM.

By C. P. SANGER, M.A., late Fellow of Trinity College,
Cambridge ; Barrister-at-Law. 1901 ; viii. and 136 pp.
Cr. 8vo, cloth. 2s. 6d. net. *P. S. King & Son.*

10. A HISTORY OF FACTORY LEGISLATION.

By B. L. HUTCHINS and A. HARRISON (Mrs. Spencer),
B.A., D.Sc. (Econ.), London. With a Preface by SIDNEY
WEBB, LL.B. New and revised edition, 1911 ; xvi. ;
298 pp., Demy 8vo, cloth. 6s. net. *P. S. King & Son.*

11. THE PIPE ROLL OF THE EXCHEQUER OF
THE SEE OF WINCHESTER FOR THE FOURTH
YEAR OF THE EPISCOPATE OF PETER DES
ROCHES (1207).

Transcribed and edited from the Original Roll in the
possession of the Ecclesiastical Commissioners by the
Class in Palæography and Diplomatic, under the super-
vision of the Lecturer, HUBERT HALL, F.S.A., of H.M.
Public Record Office. With a Frontispiece giving a
Facsimile of the Roll. 1903 ; xlviii. and 100 pp., Folio,
13½ in. by 8½ in., green cloth. 15s net.

P. S. King & Son.

12. SELF-GOVERNMENT IN CANADA AND
HOW IT WAS ACHIEVED : THE STORY OF
LORD DURHAM'S REPORT.

By F. BRADSHAW, B.A., D.Sc. (Econ.), London ; Senior
Hulme Exhibitioner, Brasenose College, Oxford. 1903 ;
414 pp., Demy 8vo, cloth. 3s. 6d. net.

P. S. King & Son.

13. HISTORY OF THE COMMERCIAL AND
FINANCIAL RELATIONS BETWEEN ENGLAND
AND IRELAND FROM THE PERIOD OF THE
RESTORATION.

By ALICE EFFIE MURRAY (Mrs. Radice), D.Sc. (Econ.),
former Student at Girton College, Cambridge ; Research
Student of the London School of Economics and Political
Science. 1903 ; 486 pp., Demy 8vo, cloth. 3s. 6d. net.

P. S. King & Son.

14. THE ENGLISH PEASANTRY AND THE
ENCLOSURE OF COMMON FIELDS.

By GILBERT SLATER, M.A., St. John's College,
Cambridge; D.Sc. (Econ.), London. 1906; 337 pp.,
Demy 8vo, cloth. 10s. 6d. net. *Constable & Co.*

15. A HISTORY OF THE ENGLISH
AGRICULTURAL LABOURER.

By DR. W. HASBACH, Professor of Economics in the
University of Kiel. Translated from the Second Edition
(1908), by Ruth Kenyon (1908). With preface by
Sidney Webb, LL.B. Cloth. 7s. 6d. net.

P. S. King & Son.

16. A COLONIAL AUTOCRACY: NEW SOUTH
WALES UNDER GOVERNOR MACQUARIE, 1810-
1821.

By MARION PHILLIPS, B.A., Melbourne, D.Sc. (Econ.),
London. 1909; xxiii., 336 pp., Demy 8vo, cloth.
10s. 6d. net. *P. S. King & Son.*

17. INDIA AND THE TARIFF PROBLEM.

By H. B. LEES SMITH, M.A., M.P. 1909; 120 pp.,
Cr. 8vo, cloth. 3s. 6d. net. *Constable & Co.*

18. PRACTICAL NOTES ON THE MANAGEMENT
OF ELECTIONS.

Three Lectures delivered at the School in November,
1909, by ELLIS T. POWELL, LL.B., B.Sc. (Econ.), Fellow
of the Royal Historical and Royal Economic Societies, of
the Inner Temple, Barrister-at-Law. 1909; 52 pp., 8vo,
paper. 1s. 6d. net. *P. S. King & Son.*

By H. ARIAS, B.A., LL.B. *P. S. King & Son.*

Series of Bibliographies by Students of the School.

1. A BIBLIOGRAPHY OF UNEMPLOYMENT AND THE UNEMPLOYED.

By F. ISABEL TAYLOR, B.Sc. (Econ.), London. Preface by Sidney Webb, LL.B. 1909 ; xix., 71 pp., Demy 8vo, cloth, 2s. net ; paper, 1s. 6d. net. *P. S. King & Son.*

Series of Geographical Studies.

1. THE REIGATE SHEET OF THE ONE-INCH ORDNANCE SURVEY.

A Study in the Geography of the Surrey Hills. By ELLEN SMITH. Introduction by H. J. Mackinder, M.A., M.P. 1910 ; xix., 110 pp., 6 maps, 23 illustrations. Cr. 8vo, cloth. 5s. net. *A. & C. Black.*

2. THE HIGHLANDS OF SOUTH-WEST SURREY.

A Geographical Study in Sand and Clay. By E. C. MATTHEWS.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

CLARE MARKET, KINGSWAY, W.C.

is one of the Colleges of the University of London.

The object of the School is to provide for all classes and denominations, without any distinction whatsoever, opportunities and encouragement for pursuing a regular and liberal course of education of the highest grade and quality in the various branches of knowledge dealt with by the Institution, and especially those prescribed or required by the University of London from time to time. With this end in view it supplies liberal courses of education specially adapted to the needs of persons who are, or who intend to be, engaged in any kind of administration, including the service of any government or local authority, railways and shipping, banking and currency, international trade, and any of the higher branches of Commerce and Industry, and also the profession of teaching any such subjects.

The lectures and classes of the School are arranged so that students can pursue a full University course, extending over not less than three years, and including the subjects required for the B.Sc. and D.Sc. Degrees in the Faculty of Economics and Political Science (including Commerce and Industry). All courses for a first degree in this Faculty are so arranged that students, who can attend in the evening only, can meet the full requirements of the University. In co-operation with University and King's Colleges, the School offers also a complete course of study in the Faculty of Laws. Many of the courses have also been recognised by the Senate of the University in the Faculty of Arts, those for instance in Geography, History, Economics and Sociology.

The lectures and classes of the School are also open to those who are not "Internal Students," and cannot for various reasons pursue a full University course. Scientific training is provided for (i) different branches of public administration, central and local, (ii) trade and commerce, (iii) accounting, (iv) railways, (v) library administration. Many of the courses are useful to candidates for the Civil Service, especially the Consular Service, and for such examinations as those of the Institute of Bankers, the Institute of Chartered Accountants and the Society of Accountants. For fuller information regarding the work of the School intending Students are referred to *The Calendar*, which may be had on application, price 1s., by post 1s. 4d., payable in advance.
